

Ellis for Trip.com: T-Station Visa Database

Pricing proposal, September 2026. Managed service for all 18 T-Station sites. Status today: every issue in the evaluation report is fixed, all 18 stations are live at the PLUS level, 100% completeness, 100% official source coverage, zero low-confidence records.

1. What Trip.com gets

Item	Commitment
Coverage	18 stations, every destination worldwide, 25 fields per record, 13 travel document types, 7 travel purposes
Accuracy	At least 99% completeness (today 100%). 100% of records cite an official government page. Low-confidence answers are never shown to customers
Freshness	Every record is re-read against its government page automatically at least every 48 hours. Policy changes go live within 48 hours
Corrections	Five-stage correction loop with a second-person review and a 48-hour SLA. Full change log with before and after values
Q&A	AI assistant in Chinese and English, answering only from verified records with official sources
Operations	99.99% availability. Excel export beyond 10,000 rows. Deep links. Quality console for Trip.com staff to add, edit and flag routes
Localization	Installation package for local acceptance, plus bilingual operations manual and data caliber specification

2. Price

Item	Price	Terms
Managed PLUS database, 18 stations, hosted by Ellis	USD 10,000 per month	12-month term, billed quarterly in advance
One-time onboarding	USD 9,000	As estimated by Trip.com, year one only
Additional stations beyond the 18	USD 550 per station per month	Only if Trip.com adds new sites later. Same guarantees
Year one total	USD 129,000	USD 120,000 per year from year two

3. Why a monthly service rather than a one-time build

A visa database is perishable. Trip.com's acceptance standard requires policy changes reflected within 48 hours, which is continuous research work, not a one-time build. The monthly price covers keeping roughly 3,500 route pairs correct every day, the correction loop, the bilingual assistant, hosting and support. These are real running costs: AI model usage for verification and Q&A, hosting and page monitoring, a data operations specialist who rules on disputed pages, and on-call support.

Scale, from Trip.com's own evaluation	Figure
Visa questions logged at one station in one week (evaluation report, section V)	2,498
Per station per year	about 130,000
Across 18 stations per year	over 2,000,000
Cost per answered question at USD 120,000 per year	about USD 0.05
