# Welcome to the Jazz Archives database

Here you can explore classical jazz albums using our friendly search bar or just diving into our most recent additions.

Did you hear a **jazz record** and want to know more?

Do you like a **musician** and want to know other records where they play?

Do you want to start listening to jazz and **don't know where to start?**

**You've come to the right place!**

**Waltz For Debby (1962)**

Bill Evans Trio

**Emergency! (1969)**

The Tony Williams Lifetime

**It Could Happen To You (1958)**

Chet Baker

**You are now a user interface  
programmer**

# Given specifications, you can create user interactions

## Part 1 – Usable Functionality:

### 1. Menu/Navigation.

- For consistency, all the templates should be rendered with a shared template that contains a navbar.
- The navbar should contain:
  - A home link (at the “/” route)
  - A text box to enter a search query and a “go” button (at the “/search” route). When the user presses enter on the search bar it should also “go”.
  - A create link (at the “/create” route)

### 2. Home.

- It should contain a one sentence summary of the mission of the site. This mission should make it clear who the intended user is and what specific goal it helps them achieve.
- It should show the latest 10 entries added to the database to entice the viewer to click on something and start exploring.
- Each of the 10 entries should be formatted as a Bootstrap Card that contains an image and the title of the item. If there is some other essential field, it can show that too, but it should not show all the data fields – it’s meant to be a summary.
- When you click the image, it should take you to the page for viewing the item.

### 3. Search.

- Flexibility.** The query must do substring matching that is not case sensitive on the title and one other text field.
- Feedback.** In addition to returning the results, the page must say how many results there are. If there are zero results, you don’t need to do anything other than say there are zero results.
- Feedback.** When you present the results to the user, the bit that matches the substring must be easy to scan for, according to gestalt principles.

### 4. State/Options/Transitions.

- Error Detection.** When creating a new database entry, there must be error handling on all the fields. If the field must be a number, then ensure it is a number. At the very least, you can check that the field is not blank (remember to trim the text to test if it’s blank). Design the error feedback so that it directs the user’s attention to the right place to correct the error.
- Transitions.** After the user presses “submit” and the data successfully submits, allow the user to either view the item or enter a new item.
  - At the top of the page it should say, “New item successfully created.” With a button or link that says “see it here” (or words to that effect). This links to a page for viewing the item.
  - Additionally, the input boxes should clear and the focus should be placed on the first text box so the user is ready to submit another item.

### 5. State/Options/Transitions.

will now be done in /view/<id>

# The next step is to become a user interface designer

## Part 1 – Usable Functionality:

1. **Menu/Navigation.**
  - a. For consistency, all the templates should be rendered with a shared template that contains a navbar.
  - b. The navbar should contain:
    - i. A home link (at the `/` route)
    - ii. A text box to enter a search query and a “go” button (at the `/search` route). When the user presses enter on the search bar it should also “go”.
    - iii. A create link (at the `/create` route)
2. **Home.** The home link should render at the `/`.
  - a. It should contain a one sentence summary of the mission of the site. This mission should make it clear who the intended user is and what specific goal it helps them achieve.
  - b. It should show the latest 10 entries added to the database to entice the viewer to click on something and start exploring.
  - c. Each of the 10 entries should be formatted as a Bootstrap Card that contains an image and the title of the item. If there is some other essential field, it can show that too, but it should not show all the data fields – it’s meant to be a summary.
  - d. When you click the image, it should take you to the page for viewing the item.
3. **Search.** When the user presses “go” on the search link (or presses enter), it should search for the items and return a list of all matching results.
  - a. **Flexibility.** The query must do substring matching that is not case sensitive on the title and on the text field.
  - b. **Feedback.** In addition to returning the results, the page must say how many results there are. If there are zero results, you don’t need to do anything other than say there are zero results.
  - c. **Feedback.** When you present the results to the user, the bit that matches the substring must be easy to scan for, according to gestalt principles.
4. **State/Options/Transitions.** In the state that the user is in, they will still have input boxes for all the fields that they must provide.
  - a. **Error Detection.** When creating a new database entry, there must be error handling on all the fields. If the field must be a number, then ensure it is a number. At the very least, you can check that the field is not blank (remember to trim the text to test if it’s blank). Design the error feedback so that it directs the user’s attention to the right place to correct the error.
  - b. **Transitions.** After the user presses submit on the database entry screen, allow the user to either view the item or enter a new item.
    - i. At the top of the page it should say, “New item successfully created.” With a button or link that says “see it here” (or words to that effect). This links to a page for viewing the item.
    - ii. Additionally, the input boxes should clear and the focus should be placed on the first text box so the user is ready to submit another item.
5. **State/Options/Transitions.** There will no longer be a separate `/edit/<id>` route. Editing will now be done in `/view/<id>`

# What is Design?

***“Design is a plan for arranging elements to accomplish a particular purpose.”***

– Charles Eames, designer, architect and film-maker

Design is **not some magical leap** where a brilliant idea comes from outer space.

# Design is an iterative progress where you work with users to identify and solve their problems

Sitting all day hurts.

## Leaning forwards

No support for curve of lumbar spine

Excessive strain on lumbar discs

Don't perch on front of seat

Why does it hurt?  
How do people sit?

## Good slouch

for ergonomic  
chairs with  
floating tilt

Back remains supported

Floating seat tilt gives freedom of movement

What does good sitting look  
like?

# For people who sit all day in an office, alleviate back pain by designing a chair that supports the lower back

# Let me tell you a story

**This is Nadia. She is 11 years old. She lived in Houston.**

# Nadia was struggling with fractions at school

Name: \_\_\_\_\_  
Date: \_\_\_\_\_

**Fraction Test: Review of Fraction Concepts**

Compare the fractions (or < or > or =)

1.  $6\frac{2}{3}$   $\frac{3}{8}$

2.  $9\frac{3}{4}$   $\frac{4}{5}$

3.  $\frac{8}{8}$   $\frac{11}{4}$

4.  $\frac{5}{8}$   $4\frac{1}{3}$

5.  $\frac{12}{8}$   $\frac{5}{8}$

6.  $8\frac{5}{8}$   $8\frac{5}{9}$

Calculate (reduce to smallest terms)

7.  $1\frac{2}{3} \times 2\frac{2}{3} =$

8.  $8\frac{5}{8} - 5\frac{2}{3} =$

9.  $4\frac{1}{8} - 2\frac{2}{8} =$

10.  $7\frac{2}{3} - 4\frac{4}{3} =$

11.  $9\frac{2}{3} \div 3\frac{2}{3} =$

12.  $7\frac{1}{3} + 3\frac{1}{3} =$

13.  $2\frac{5}{8} \times 1\frac{2}{8} =$

14.  $2\frac{1}{8} \times 7\frac{8}{8} =$

15.  $4\frac{2}{3} \times 3\frac{1}{3} =$

16.  $4\frac{5}{8} \times 2\frac{4}{8} =$

17.  $9\frac{5}{8} - 7\frac{2}{3} =$

18.  $6\frac{1}{3} \div 9\frac{1}{3} =$

Simplify the fractions.

19.  $\frac{3}{8} =$

20.  $\frac{13}{8} =$

21.  $\frac{24}{48} =$

22.  $\frac{11}{4} =$

23.  $\frac{18}{24} =$

24.  $\frac{22}{8} =$

25.  $\frac{18}{48} =$

app.math.about.com

Score: \_\_\_\_\_

65

# Her uncle wanted to help; but he lived in New York City

# He asks about her fractions homework

*What's wrong?*

*I just don't know what to do.*

He has the insight that if she saw more examples, she could figure out how to solve fractions.

# He makes videos and uploads them to YouTube

Multiply  $1\frac{3}{4} \cdot 7\frac{1}{5}$ . Simplify your answer and write it as a mixed fraction.

$$1\frac{3}{4} = \frac{4 \cdot 1 + 3}{4} = \frac{7}{4}$$

$$\frac{7}{4} \cdot \frac{36}{5}$$

$$7\frac{1}{5} = \frac{5 \cdot 7 + 1}{5} = \frac{36}{5}$$

...and he shows it to Nadia to see if it helps.

Multiply  $\boxed{1\frac{3}{4}} \cdot \boxed{7\frac{1}{5}}$  Simplify your answer and write it as a mixed fraction.

$$1\frac{3}{4} = \frac{4 \cdot 1 + 3}{4} = \frac{7}{4} \quad \frac{7}{4} \cdot \frac{36}{5}$$
$$7\frac{1}{5} = \frac{5 \cdot 7 + 1}{5} = \frac{36}{5}$$

Fraction Test: Review of Fraction Concepts

Compare the fractions (or < or > or =)

1.  $\frac{6}{8} > \frac{4}{8}$

2.  $\frac{9}{4} > \frac{3}{4}$

3.  $\frac{1}{2} < \frac{3}{4}$

4.  $\frac{11}{8} > \frac{3}{4}$

4.  $\frac{5}{8} < 4\frac{1}{2}$

5.  $\frac{12}{8} > \frac{1}{2}$

6.  $\frac{8}{5} < \frac{8}{9}$

Calculate (reduce to smallest terms)

7.  $1\frac{1}{2} \times 2\frac{1}{2} =$

8.  $8\frac{1}{2} - 5\frac{1}{2} =$

9.  $4\frac{1}{2} - 2\frac{3}{4} =$

10.  $7\frac{1}{2} - 4\frac{4}{5} =$

11.  $9\frac{1}{2} \div 3\frac{1}{2} =$

12.  $7\frac{1}{3} + 3\frac{1}{3} =$

13.  $2\frac{5}{8} \times 1\frac{2}{3} =$

14.  $2\frac{1}{2} \times 7\frac{4}{5} =$

15.  $4\frac{2}{3} \times 3\frac{1}{3} =$

16.  $4\frac{3}{5} \times 2\frac{4}{5} =$

17.  $9\frac{1}{2} - 7\frac{1}{2} =$

18.  $6\frac{1}{3} + 9\frac{1}{3} =$

Putty the Fractions

19.  $\frac{1}{2} = \frac{13}{26}$

20.  $\frac{13}{8} = \frac{26}{16}$

21.  $\frac{1}{2} = \frac{11}{22}$

22.  $\frac{11}{4} = \frac{22}{8}$

23.  $\frac{1}{2} = \frac{13}{26}$

24.  $\frac{13}{8} = \frac{26}{16}$

25.  $\frac{1}{2} = \frac{11}{22}$

26.  $\frac{11}{4} = \frac{22}{8}$

Good work

Score

65

# The videos help other students learn their fractions, too

Multiply  $1\frac{3}{4} \cdot 7\frac{1}{5}$ . Simplify your answer and write it as a mixed fraction.

$$1\frac{3}{4} = \frac{4 \cdot 1 + 3}{4} = \frac{7}{4}$$
$$7\frac{1}{5} = \frac{5 \cdot 7 + 1}{5} = \frac{36}{5}$$
$$\frac{7}{4} \cdot \frac{36}{5} = \frac{7 \cdot 36}{4 \cdot 5} = \frac{7 \cdot 9}{1 \cdot 5} = \frac{63}{5}$$

Parents

This is a  
general  
problem

However, it started by helping a specific person with a specific problem, and a lot of iteration.

Math  
Date: \_\_\_\_\_

**Fraction Test: Review of Fraction Concepts**

Compare the fractions in  $\square$  or  $\square$ .

1.  $6\frac{2}{3}$   $\square$   $2\frac{1}{2}$       2.  $9\frac{3}{4}$   $\square$   $\frac{8}{5}$       3.  $\frac{5}{8}$   $\square$   $\frac{11}{4}$

4.  $\frac{5}{10}$   $\square$   $4\frac{1}{2}$       5.  $\frac{12}{16}$   $\square$   $\frac{5}{8}$       6.  $8\frac{5}{8}$   $\square$   $8\frac{6}{8}$

Calculate the fractions to smallest terms.

7.  $1\frac{2}{3} \times 2\frac{2}{3} = \square$       8.  $8\frac{1}{2} - 5\frac{2}{3} = \square$       9.  $4\frac{1}{2} - 2\frac{2}{3} = \square$

10.  $7\frac{2}{3} - 4\frac{4}{5} = \square$       11.  $9\frac{2}{3} \div 3\frac{2}{3} = \square$       12.  $7\frac{1}{3} \div 3\frac{1}{3} = \square$

13.  $2\frac{2}{3} \times 1\frac{2}{3} = \square$       14.  $2\frac{1}{2} \times 7\frac{4}{5} = \square$       15.  $4\frac{2}{3} \times 3\frac{1}{3} = \square$

16.  $4\frac{2}{3} \times 2\frac{2}{3} = \square$       17.  $9\frac{1}{2} - 7\frac{2}{3} = \square$       18.  $6\frac{1}{2} \div 9\frac{1}{2} = \square$

Simplify the fractions.

19.  $\frac{5}{10} = \square$       20.  $\frac{13}{16} = \square$       21.  $\frac{2}{10} = \square$       22.  $\frac{11}{8} = \square$

23.  $\frac{5}{10} = \square$       24.  $\frac{22}{16} = \square$       25.  $\frac{5}{16} = \square$

**Don't start big. Start small.**

COMS 4170 · SPRING 2026

# Specific vs. General Needs

**What are the kinds of things politicians, beauty queens and Silicon Valley say they will solve?**

In the media, people often claim they are solving big problems.

There is something appealing about how grand a big problem sounds; but...

# What is the problem with general goals?

They are not actionable.

# General vs. Specific goals

Goal 1: Clean the house

Goal 2: Fold the basket of laundry

General goals sound appealing;  
but specific goals are actionable:  
what **person** is going to execute what **action**  
on what **object** and get what **value**?

# General goals are actually domains

## Domain:

“Clean the house”

## Specific goal:

“Fold the basket of laundry”

# What is the risk with a specific goal?

“Fold the basket of laundry”

Specific goals can be trivial.

**However, if you start specific  
you can usually generalize.**

|                                                                                     | Domain                     | Specific Need                                                  | Generalized to                             |
|-------------------------------------------------------------------------------------|----------------------------|----------------------------------------------------------------|--------------------------------------------|
|     | Online shopping            | Uncommon books                                                 | Clothes, food, Amazon Fresh, other sellers |

COMS 4170 · SPRING 2026

# Design Project

# Design Challenge

- Design and build a **web** application
- To help a user learn an introductory topic **interactively**
- Within a **domain of your choosing**
- The interactive experience must center around **media**  
(**images, video, audio**)
- The interactive experience should help users assess their learning with a quiz
- Users should keep learning through feedback from the quiz
- It should take under 10 minutes total

# Design Challenge

The USER is another student in this class

Why?

- So that you can test your designs on actual people
- Your TA must think that this is something valuable for them to learn
- Consequently, you cannot design for any of the following:
  - Children or teenagers who are not in this class
  - People who only speak Serbian (everyone here speaks English)
  - Majors not represented in this class
  - A topic your TA is uninterested in (your TA has to like the idea)

# Design Challenge

The TOPIC must be in a domain of your choosing; but it must be focused enough to teach in 10 minutes.

- Examples of broad domains:
  - chess, basketball, art history, music etc
- Examples of focused topics:
  - Chess: How and when to perform 3 different opening moves in chess for chess beginners
  - Basketball: How to run a pick and roll in basketball for casual NBA fans
  - Art History: How to tell Impressionist paintings from Post-Impressionist paintings for ArtHum students
  - Music: How to mix a drop swap for aspiring DJs

# Design Challenge

## Project Logistics

- **Weekly homework** will build up to the final project (5% of grade)
- Final submission is worth **20% of your grade**
- This project is to be completed **individually**
  - You will meet with a TA to receive feedback
  - You will meet with your TA in a group to get feedback and support each other

## **Design Insight for Teaching:**

**People learn through interaction and feedback, not from reading long streams of text.**

COMS 4170 · SPRING 2026

# Examples

# Learning Lighting

Learn how light interacts with a geometric cube model to produce different light and dark values and cast shadows with this interactive tool.

[Learn](#)[Quiz Yourself](#)

# How does it fulfill the requirements?

|                    |                                             |
|--------------------|---------------------------------------------|
| <b>Domain</b>      | <b>Lighting</b>                             |
| <b>Topic</b>       | <b>Lighting from five directions</b>        |
| <b>Media</b>       | <b>3D model</b>                             |
| <b>Interaction</b> | <b>Click the model</b>                      |
| <b>User</b>        | <b>Would you learn something from this?</b> |

Step 1: Listen

A Minor Third has 3 half steps between the lower note and the higher note. Try counting the number of lines and spaces between the two notes on the image above.

The "minor" quality indicates that this interval comes from the minor scale of its lower note, and that the interval sounds slightly dissonant or unhappy.

over the classroom  
to see where to click.

Click to see the sign!

You have 11 items left to learn!

# How does it fulfill the requirements?

|                    |                                                      |
|--------------------|------------------------------------------------------|
| <b>Domain</b>      | <b>Sign Language</b>                                 |
| <b>Topic</b>       | <b>Learning objects in a classroom</b>               |
| <b>Media</b>       | <b>Video (for sign language), interactive images</b> |
| <b>Interaction</b> | <b>Click on objects in image to learn the names</b>  |
| <b>User</b>        | <b>Beginner sign language learner</b>                |

# Project Logistics

- **Weekly homework** will build up to the final project (5% of grade)
- Final submission is worth **20% of your grade**
- This project is to be completed **in a group**
  - You will meet with your TA to receive feedback

# You **MUST** iterate based on your TAs feedback

- There are no right or wrong answers to design problems.
  - But there are better and worse answers
- A core skill we want you to learn is to iterate based on feedback. Therefore, your grade is depending on your making your TA happy.

COMS 4170 · SPRING 2026

# The Iterative Design Process

# The biggest misconception about creativity

Idea

Product

# Creativity is a Process

**Your USER is your TA (and students in this class). You have to identify a problem you can solve.**

# HOMEWORK 07 INDIVIDUAL WARM-UP:

2. **Brainstorm 5 domains.** What are 5 domains that you could teach things to your classmates?
  - a. Note: These must be things where you already know a lot of stuff, because you obviously can't teach a topic that you don't know well.
  - b. Note: domains are broad like chess, basketball, art history. Next, we'll think about specific topics, which are much less broad
3. **Brainstorm specific topics.** For each of those 5 domains, list 5 specific topics that you could teach interactively in under 10 minutes.
  - a. For each specific topic,
    - i. What media would you use?
    - ii. What would you quiz users on to test their knowledge? (a short sentence or phrase is fine)
  - b. Note: It has to be hard enough that people don't already know it, but specific enough that you can teach it in 10 minutes.
  - c. Note: To get from a broad domain to a specific topic, you may need to narrow the topic down more and more. For example:  
Art History → The Modern Era → Identifying types of paintings  
→ identifying post-impressionist paintings.
2. **Select favorite topics.** Of these 25 potential topics, which are your favorites? List between 3 and 6 topics that you would be willing to pursue. PRESENT THESE IN YOUR SLIDES FIRST.

The best way to have a good idea  
is to have lots of ideas.

- Linus Pauling

**Coming up with the perfect idea can be intimidating**

**many of these idea will be garbage. That is OK. You have to get through the bad ones to get to the good ones.**

**Keep the ideas flowing!**  
**Do not be critical of the ideas.**

**You can prune out the bad ideas later.**

**In a group brainstorm, if you dislike someone's idea, what should you do?**

**Have another idea**   

The best way to have a good idea  
is to have lots of ideas.

- Linus Pauling

# Brainstorming

## Domains you could teach

- Cooking
- Programming
- Languages
- Yoga
- Fitness
- Music / music theory
- Games
- How to dance on Tik Tok
- Sit-coms / Cartoons
- Fashion
- Wine
- Cars
- Travel
- Comic Books
- Anime
- Notable architectural buildings
- Astrology
- Photography
- Identify poisonous plants
- Rules of basketball / volleyball
- Flowers
- Art History

# Brainstorming

## Specific topics to teach cooking

- How to tell when meat is cooked?
- Learn different pasta shapes
- How prepare sashimi
- How to fold dumplings
- Vegan meat substitutes
- How to tell if fruit is fresh

# Brainstorming

## Specific topics to teach in the dance domain

How to do:

- Tik tok dances
- the Moonwalk
- Fortnite dance
- Stanky leg (specific song)
- Ballet positions (five basic ones, explain what they are and how to add onto them)
- Stretching for dance
- Steps for ballroom dancing

**For this class, topics must be small enough that it can be learned in 10 minutes; but also hard enough that the user does not already know it.**

# Good Topics

**Brainstorm domains and topics...**

**but we'll have to narrow them down.**

**To pick an idea, talk to users and learn about their experience.**

# To understand the problem, you have to understand your users' experiences

Phase 1: Understand the problem

# Talk to Users

If you ask “What are your problems?” you get answers like:

I don't like  
eating  
vegetables

I don't like  
speaking up  
in class

**We want to get beyond the obvious,  
And get insights about what parts of this they hate.**

I don't  
like paying  
taxes

I don't like  
doing  
homework

I don't like  
my mobile  
phone  
carrier

To identify the users' pain points and *find opportunities to help them*, we need to dig into the details of their experience.

*I don't like  
speaking up in  
class.*

What's the experience of speaking up in class?

## Step 1: Find a real person (user) who has done \_\_\_\_\_ recently

Jamie – a student in User Interface Design who is shy, but is forced to participate in class and fill out a form after class to record her participation

## Step 2: Ask the user about the last time they did \_\_\_\_\_

When was the last time you **spoke up in class**?

- What did you say?
- Why did you decide to speak up then?
- What did it feel like. Easy? Hard? Scary?
- What happened after you spoke up?
- What did you think/feel/say/do?
- Then what?

# Why not ask a broad question: “*Why don’t you like speaking up in class?*”

People are better at accurately recalling a specific incident. Asking about a general experience will force them to synthesize and generalize on the spot. We want to get data on one raw, authentic experience and synthesize it ourselves.

## **Step 3: Listen to the users' story. Ask questions to help elicit the chain of events. At each stage, ask:**

What were they doing?

What were they thinking?

What were they saying?

## Student answers to: “Tell me about the last time you participated in class?”

|                                                                                                        |                                                    |
|--------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| I’m worried my accent won’t be understood                                                              | I always forget to fill out the participation form |
| I only saw something if I’m 100% sure of the answer. I don’t like to guess                             | I always forget to fill out the participation form |
| I’m so nervous about participating that I don’t pay attention                                          | I always forget to fill out the participation form |
| It takes me a few seconds to think of something, and by then you’ve called on someone in the front row | I always forget to fill out the participation form |

# Why is filling out the form so hard?

Fill out participation now!

Columbia University

## User Interface Design

**I remind you at the end of class.  
Don't you pull out your phone after  
class anyway?**

There is other stuff to check on my phone that I get sucked into.

I'm running to my next class, and my mind switches tasks

I need a computer to fill it out because I have to be logged in

I didn't know there was a deadline to fill them out by!

Can't I just put it on the homework?

# Step 4: Synthesize the experience into states. Name them.

## Map out the emotional highs and lows.

NN/g

CUSTOMER JOURNEY MAP TEMPLATE

|                        |         |                    |                   |         |
|------------------------|---------|--------------------|-------------------|---------|
| <div><div></div></div> | PERSONA | SCENARIO           | USER EXPECTATIONS |         |
| PHASE 1                |         | PHASE 2            | PHASE 3           | PHASE 4 |
| DOING                  |         |                    |                   |         |
| THINKING               |         |                    |                   |         |
| SAYING                 |         |                    |                   |         |
| INSIGHTS               |         | INTERNAL OWNERSHIP |                   |         |

## Step 5: Identify insights, opportunities and metrics.

- After class, people want to move on. They're switched mental states.
- **Idea:** Have people just write their participation on the homework.
- Not everybody loves speaking up in front of 200+ people.
- **Idea:** Focus participation on the smaller sections where we can give more feedback.

# For Homework 7, interview someone in this class about your domain or topic.

- Interview them about their experience with a domain/topic you are an expert in.
    - What do they already know about the topic?
    - For the domain of “recycling” what do they already know?
    - Where is their knowledge stuck?
  - Write down 3 insights you learned. (things you didn’t know about the person or problem before hand)
  - If they are uninterested in the domain/topic, pick another topic, or another person in the class.
1. **Individual: User Interview.** For one of the domains you are considering teaching, find a target user (someone in this class) and interview them for 10-20 minutes. Get a sense of what they already know about the topic, and what they might be interested in learning about the topic. If you cannot find a user interested in the domain, you’ll have to pick a new domain.
    - a. **Interview them.** Turn in a document with 3 insights you got from the interview (things you didn’t know about people’s experiences with this topic and domain before)
      - i. Some sample questions to get you started:
      - ii. Domain questions: (ex. “Chess” is a domain)
        - What are your experiences around (domain)? If this goes well, you can follow up about more specific topics.
        - What do you already know about (domain)? If this goes well, you can follow up about more specific topics?
        - What’s interesting to you about (domain)?
      - iii. Topic questions: (ex. “Opening moves” is a topic in the domain of chess)
        - Have you ever heard of (topic)?
        - What do you know about (topic)?
        - If they don’t know much, you might have to tell them a little bit about it or show an example.
        - If the topic is interesting to them, why is the topic hard for you?
        - If the topic is interesting to them, why? How might they use this knowledge? Ideally, what problem do they have that your website might help them solve.

# Interviewing Users

# Scenario

Woes of the city dweller:

- Time
- Unclear pricing
- Quality control

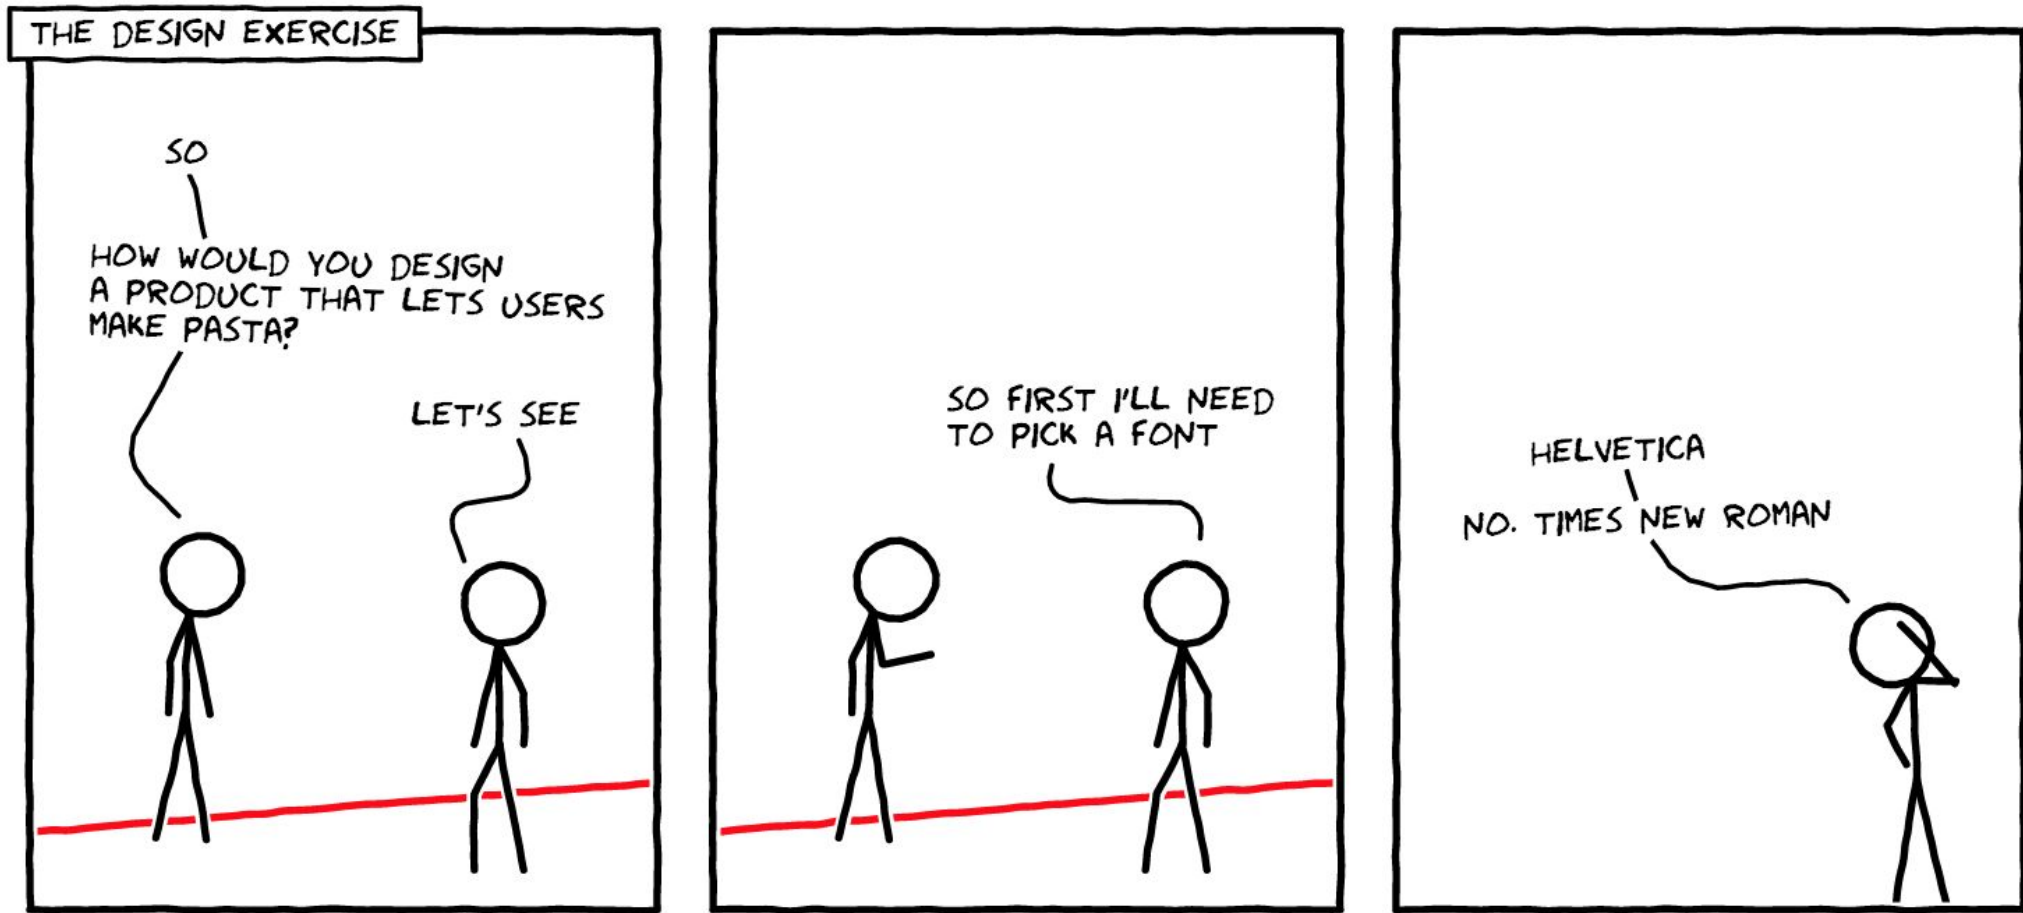

# Design Challenge

We've **identified the users pain point:** city dweller who wants to minimize their time at the laundromat by utilizing wash and fold. Now, we're tasked with **finding opportunities to help them.**

Consider opportunities for providing clearer pricing and better quality control.

# Where to Start?

**Solo Exercise:**

# User Research Questions

3 minutes

What are a few questions you'd like to ask potential users about their laundry habits, behaviors, and preferences to get to know their needs?

# Which of These Is a Better Question?

Would you like to have your laundry done by using an app?

Describe how you handle your laundry.

**Ask open-ended questions.**

# Which of These Is a Better Question?

Tell me about a time you used wash-and-fold services.

How do you usually use wash-and-fold services?

**Focus on specific instances.**

# Which of These Is a Better Question?

What are your frustrations  
with wash-and-fold  
services?

How do you feel  
about wash-and-fold  
services?

**Avoid *leading* questions.**

**Solo Exercise:**

## User Research Questions (cont'd)

3 minutes

Now, knowing what we covered here about interview questions, return to what you wrote originally.

How can you make it more powerful, more open-ended, and/or less biased?

# Creating an Interview Guide

The interview guide is a document that details what will happen in the interview, your own set of instructions to help carry out the interview.

Consider the following interview outline:

- Introduction
- Initial questions, e.g. “when was the last time you switched phone plans?”
- Main body of the interview
- Wrap up

## Reading Ahead Interview Guide

### Introduction (5 min)

- Give out release form and get signature
- Turn on video camera
- Confirm timing
- Who are we and why are we doing this
- There no wrong answers, this is information that help us direct our work

1. We'd like to talk with you today about reading. We have lots of questions to ask you, and we're interested in hearing your stories and experiences.

### Overview (10 min)

2. Can you tell us a little about yourself—what you do, hobbies, etc.?
3. Can you tell me about a recent book you've read? Your favorite all-time book?
4. Why do you read?
5. What is your current reading like?

*[Probe for different types of reading, locations, motivations, etc.]*

6. Is your current reading typical for you? How so/how is it different?
7. Do you call yourself a “reader?” What does that mean to you?
- [Look for their categories: could be frequency, importance, etc.]*

If you were telling a new acquaintance about yourself, would you talk about reading? What else would you say about yourself?

### Exploring Specifics (locations, subject matter, motivations) (10 min)

8. You mentioned (follow up on specifics from overview). Is this always the same, or does it change? Why do you do it this way?
9. Have there been any special circumstances where you've done it differently? Why? How was that?
10. Has anything about the way you do this changed over time? How? Why?

### Environment (5 min)

11. What makes a good reading environment for you? What are the elements? What makes an environment not good?

**Let's practice asking  
each other one  
interview question**

**“Tell me about a time you borrowed a book from the library.”**

At each stage:

What were you doing?

What were you thinking?

What were you saying?

**Now your turn -  
Try this exercise on a  
classmate.**

**“Tell me about a time you borrowed a book from the library.”**

At each stage:

What were you doing?

What were you thinking?

What were you saying?

**NN/g**

**But you're not ready to  
design solutions yet.**

# Once you have the map, now what?

Look for **points** in the journey where **expectations are not met**. Users go into an interaction with certain expectations.

When the interaction does not meet their expectations, you see pain points in a customer journey.

# Once you have the map, now what?

Identify **high points** or points where expectations are met or exceeded. Look at the high points in the journey — the interactions that users are happy with.

Where do they express positive thoughts and emotions? These insights are also valuable. You may be able to amplify them or recreate similar experiences elsewhere in the journey.

# Once you have the map, now what?

Identify the **low points** or points of friction. These points are usually represented visually as dips in the journey diagram.

See where the journey reaches its lowest point and compare it to other low points in the journey. These should be on your shortlist of optimizations.

# Once you have the map, now what?

Evaluate time spent.

Look for **moments of truth**. This moment may be where your research shows a lot of emotion (positive or negative) or where you see a strong divergence between the paths different users take.

Be sure to look for moments of truth and to call attention to them when you find them.

Phase 1: Understand the problem

# Competitor Analysis

# To understand the problem, you have to understand your users' experiences

# There are (almost) no new ideas

- Assume if you are thinking about a problem other people have too
- That's totally fine
- However, it also means you need to do your research

**Before you even THINK about  
solving the problem**

what are some ways students find clubs to join?

Students can find clubs to join in various ways, both on and off campus. Here are some common methods:

1. **Campus Activities Fair:** Many universities and colleges host a campus activities fair at the beginning of each academic year. This is an excellent opportunity for students to explore a wide range of clubs and organizations in one place.
2. **University Website:** Most educational institutions maintain a list of clubs and organizations on their websites. Students can browse these lists to find clubs that match their interests.
3. **Social Media:** Many clubs and organizations have a presence on social media platforms like Facebook, Instagram, and Twitter. Students can search for and follow these pages to stay updated on club events and meetings.
4. **Bulletin Boards:** Check out bulletin boards around campus. Clubs often post flyers and announcements about their meetings and events on these boards.
5. **Word of Mouth:** Asking fellow students, roommates, or classmates can be an effective way to learn about clubs. Friends and acquaintances may have recommendations based on their interests.
6. **Involvement Fairs:** Some schools host involvement fairs or similar events where clubs set up booths to showcase what they have to offer. These events are great for meeting club members and learning more about their activities.
7. **Departmental Involvement:** If you have a specific academic interest, consider joining clubs

# I am guilty of not asking the internet

- I joined a startup to do online therapy. When I joined, no one had researched what's already out there.
- There were definitely competitors
- I went and tried them all out and learned what they did well and poorly.

# **This is so obvious it hurts. However, people constantly skip this step. Why?**

- Perhaps, people don't do it because they think of myself as being "original" and "creativity" and "individualistic."
- I'm excited about building something new. I don't want there to be a solution out there. So I don't look for it.

*(I don't know the answer to this. Do you?)*

# Don't worry about originality. Worry about solving the problem.

- You're going to steal ideas from other people
- It's called background research
- Your unique ideas are probably just a recombination of stuff you've seen before, anyway

# Design Research

- Identifying the **existing or obvious** solutions
- **Ask the Internet** - Ask GPT, Google, DeepSeek, Perplexity, etc
- Find **direct solutions (competitors)** and research what they do
- Find **indirect solutions** and research how they work.

Allow these ideas to sit with you before jumping to a solution

**Problem:**

**How to better help new and incoming students find clubs and events on campus**

What's the obvious solution?

### Direct Competitor Definition

Direct Competitors are the ones who offer the same, or a very similar, set of features to your current or future customers, which means they are solving a similar problem to the one you are trying to solve.

# Direct Competitors for finding clubs and events

SEARCHING & BROWSING

## Admissions Club Directory

The admissions website has an outdated directory of student clubs and organizations that is used for prospective students. There is no way to see the clubs by Alphabetical order and some clubs that I know of on campus today are missing.

## Admissions Club Pages

The actual clubs pages lead to a clubs website of they run their own. All of these links are external links that have varied and non-standardized amount of information about the clubs. If a club doesn't have their own website, there's no contact email or further information beyond the club's name.

## LionLink

This was Columbia's attempt at centralizing all the organizations and events on campus. It's **poor mobile view, lack of an app, lack of integration into current Columbia systems, and an extremely messy and broken portal for clubs made adoption fail.** It shows that there is interest in a solution similar though.

## LionLink Events

There have only been 6 events on LionLink posted in the last two years, and there are no upcoming events. Clubs, administrators, and students have abandoned LionLink as a centralized solution.

PROPOSING

## Undergraduate Student Life

Student Life's website has a section about creating clubs, but it is extremely vague beyond creating a constitution. It also provides information about the student councils before the governing boards when the councils are not involved in the proposal process. Tiny links at the bottom of the page lead users to the home page of the governing boards.

## Student Governing Board

The new group applications section of the website is tucked away and is not the easiest to find. The steps to creating a new group for SGB include doing at least two semesters of programming. **Where does SGB expect you to organize this programming if there's no place to advertise new clubs and if you can't reserve space on campus until you're recognized as a club by a board?**

## Activities Board at Columbia

The new group recognition page is extremely clear on their website, but shows that there are a long list of prerequisites for recognition as a new club. Specifically, the club has to have at least 20 members for two consecutive semesters when the clubs aren't recognized and can't reserve space for 20 members to meet. They mention there's 5 different boards that clubs can get funding from, and none of them have the same process.

## Barnard Clubs & Events

I couldn't find where to propose for a new club through Barnard, Columbia's sister school, but I did find that their events and clubs have their own calendar that isn't integrated in Columbia University overall. This shows the **decentralized information across our various undergrad schools** as well.

# Direct Competitors for finding clubs and events

## My dorm floor poster board

Most of the flyers for clubs were for events that happened over a week ago or even last semester. Also, there wasn't equal representation of the 500+ organizations on campus on this one board.

## Academic hall poster board

I watched people walk by this wall of posters for 15 minutes, not a single person stopped to look at any of them. It can be an overwhelming experience with too many posters as well.

## In-Direct Competitor Definition

In-Direct Competitors are the ones who offers a similar set of features but to a different customer segment; which means indirect competitors are solving the similar problem but for a different customer base.

# In-Direct Competitors for finding clubs and events

**Facebook** has a focus around community and personal events, and they make it easy to invite your friends and share information about an event. It is often used as an alternative currently for marketing clubs and event on campus through our Columbia Class pages, but it leaves people not constantly on social media (or without a Facebook) in the dark. **Allowing students to still share clubs and events through social media should be a product feature if user adoption is to be successful.**

**Meetup** is a successful event and gathering platform that focuses on specific interests. I've personally had success getting connected to groups around design systems and operations in both Sydney and New York. With Meetup creating interest-based communities around the world, I believe this model could be tweaked applied to campus community as well. **Their app encompasses all the functionality needed to meet up efficiently and focuses on the accessibility and visibility of their groups; this focus should be kept for the solution designed for college campuses.**

## It's Like X; but for Y

- AirBnB: It's like Uber, but for hotels.
- Farmers Only: It's like OK Cupid, but for Farmers (only)
- LinkedIn: It's like Facebook, but for work associates

A great way to find a solution is to reuse the structure of another solution, but for a different problem or market segment.

# You are never the first person to think of this problem

- Newton and Leibnitz invented calculus at the same time
- The steam engine was invented 4 or 5 recorded times before it started the Industrial Revolution
- Alan Turing was the second person to solve the Halting Problem (his advisor Alonzo Church beat him to it)
- Long before Facebook there was MySpace, and Friendster and a bazillion other social networks
- DeepSeek and Kimi.ai released deep reasoning models within a day of each other

All you want is a solution to a problem. If someone else has already done it, that's great. If they've come close but haven't exactly solved our problem, we want to **understand what they've already done** and how to make it better or different for our problem different problem or market segment.

# Design Research

- Identifying the **existing or obvious** solutions
- **Ask the Internet** - Ask GPT, Google, DeepSeek, Perplexity, etc
- Find **direct solutions (competitors)** and research what they do
- Find **indirect solutions** and research how they work.

Allow these ideas to sit with you before jumping to a solution

# Homework

2. **Individual: Competitor Analysis.** In your group, each person should analyze a different competitor product. For your chosen product, do the following:
- What topic does it teach? (if it teaches multiple topics – like multiple coding languages), pick one to focus (like JavaScript) on for the sake of concreteness.
  - Who is the target audience (or who do you think benefits the most from it)?
  - What media does it use to help people learn? (show a screenshot and describe it in a sentence)
  - What is a major way it uses interaction to help people learn? (show a screenshot and describe it in a sentence)
  - What are 3 things you like about the interaction and media usage that help people learn? (what might inspire your design?)
    - Show a screen shot for each one.
  - What are 3 things that could be better or different about the interaction and media usage that help people learn?
    - Show a screen shot when applicable.

Phase 1: Understand the problem

# Academic Research

# Read books, papers, theories, scientific evidence to get insights into the problem.

# Educational Insight #1

Reading textbooks is boring.  
Nobody learns from that.  
People learn by practicing –  
from doing something and  
getting feedback.

# Educational Insight #1

Students are terrible at assessing their learning. They need tools to assess themselves.

# Insights and opportunities can come from anywhere. Just observe and ask why.

## In academic studies

Why didn't Aristotle try any of his theories like Galileo did?

## During everyday activities

How do baristas manage to serve all these people?

## In the things you find fun

How does Popovic always construct a playoff team?

# Everyday activity: changing the thermostat

Why do I constantly have to set and adjust this thing?

# Real insights behind applications you use.

| <b>Problem</b>            | <b>Idea</b>                                                                                                       |
|---------------------------|-------------------------------------------------------------------------------------------------------------------|
| Teaching fractions        | Workbooks suck. I'm going to show people how I think through them problem                                         |
| Making yearbooks          | Photoshop is HARD, expensive, and sharing resources is annoying. Maybe some online templates can make this easier |
| Social network for photos | People take crappy photos and are not too eager to share them. What if filters made every photo beautiful?        |

Lecture 01: 10 Usability Heuristics

# Homework 07

# Homework 7 has 3 parts

- Individual Warm Up due **Monday at 11:59PM**
  - Brainstorm domains and topics you could teach
- Group Warm Up due **Friday at 11:59PM**
  - Groups must be formed by **Friday at 11:59PM**
- Main Homework due **Monday at 11:59PM**
  - User Interview
  - Competitor Analysis
  - Group Presentation: what 5 topics is your group considering?
- Lecture on **Tuesday at 7:00PM**
- TA Session on **Tuesday (after lecture)**
  - Present topics and get TA feedback
  - Group formation starts

# 10% of your grade is participation in your TA section

- Show up on time
- Be prepared to present
- Present your materials clearly and concisely.
- Actively, listen to other presentations.
- If you're virtual, keep your camera on at all times. No exceptions.
- Take feedback from your TA.
- If you can't attend a feedback session, email your TA in advance to schedule a makeup session before **Friday 11:59PM**

Lesson 15: Brainstorming

# Summary

# The biggest misconception about creativity

Idea

Product

# Creativity is a Process

**Your USER is your TA (and students in this class). You have to identify a problem you can solve.**

The best way to have a good idea  
is to have lots of ideas.

- Linus Pauling

## Step 2: Ask the user about the last time they did \_\_\_\_\_

When was the last time you **spoke up in class**?

- What did you say?
- Why did you decide to speak up then?
- What did it feel like. Easy? Hard? Scary?
- What happened after you spoke up?
- What did you think/feel/say/do?
- Then what?

# Research other ways of solving similar problems
