

HW7

Group Main Assignment

Brainstorming, Interviews & Competitor Analysis

Jolie Abadir | Sofia Hirao

TA: Anushka Bhatnagar | COMS W4170 | Spring 2026

5 Potential Group Topics

01 Reading a Squat Assessment: Good vs. Compensated Form

Domain: Movement Analysis

Jolie Abadir

02 fMRI BOLD Signal vs. Actual Neural Firing

Domain: Cognitive Neuroscience

Jolie Abadir

03 How Different Leg Movements Make You Run Faster

Domain: Running

Sofia Hirao

04 Different Breathing Patterns to Keep Energy High

Domain: Running

Sofia Hirao

05 How to Mix Limited Colors Using Color Theory

Domain: Painting

Sofia Hirao

User Interviews

JOLIE ABADIR

Interviewee: Sofia Hirao

Domain: Movement Analysis & Biomechanics

Insight 1:

People develop intuitive body awareness through sport but lack the vocabulary to describe what they're experiencing.

Insight 2:

Compensation patterns are hard to self-identify in real time - you need external feedback like video to see what you can't feel.

Insight 3:

The primary motivation to learn movement analysis is injury prevention, not performance - safety comes first.

Viable topic:

Reading a Squat Assessment: Good vs. Compensated Form

"Understanding proper running or squatting form would help me exercise safely."

SOFIA HIRAO

Interviewee: Jolie Abadir

Domain: Baking & Cake Decorating

Insight 1:

Users have no mental model for piping tips - they know different tips exist but have zero ability to match tip to pattern.

Insight 2:

Pressure control is the core frustration - users instinctively grip too hard or unevenly and the frosting goes everywhere.

Insight 3:

Visual appeal is the motivation - users are drawn to the idea of clean, intentional design rather than the technical process.

Viable topic:

How to Pipe Frosting: Choosing the Right Tip

"The one time I used a bag it just went everywhere and I couldn't control the pressure at all."

Breathwrk App

TOPIC

Guided breathing techniques (box, 4-7-8, 3-part breath, air hunger) for energy, stress, sleep, mood, and athletic performance

INTERACTION METHOD

Passive follow-along — user matches breath to the pulsing circle. Haptic vibration option available. No tapping required mid-exercise.

TARGET AUDIENCE

Adults managing stress, sleep, or performance goals. Peloton partnership signals fitness-oriented users. Onboarding asks: Better Sleep, Stress/Anxiety, Energy & Focus, Overall Health.

3 THINGS THAT WORK

1. Goal-based onboarding immediately personalizes content and lowers friction. 2. The breathing circle IS the instruction — no reading required while doing it. 3. Post-session breath count and streak create lightweight habit-building.

MEDIA USED

Expanding/contracting circle animation that pulses with the breath cycle. Nose/mouth icons show inhale vs. exhale. Full-screen, minimal, distraction-free.

3 THINGS TO IMPROVE

1. Never explains WHY a technique works — no educational layer, just instruction. 2. Exercise library is an alphabetical flat list with no context or guidance on when to use each. 3. Breath Score (53/100) shown with zero explanation of what it means or how to improve.

Wilton Online Baking School

TOPIC	INTERACTION METHOD
Interactive piping guides using different frosting tips on cakes	Clickable technique selection, replayable videos, and step-by-step visual guidance.
TARGET AUDIENCE	3 THINGS THAT WORK
Home bakers and beginner decorators looking to improve cake presentation	Step-by-step video demonstrations, Clickable technique selection, and Combination of visual and written instructions
MEDIA USED	3 THINGS TO IMPROVE
Instructional videos demonstrating techniques, images showing finished patterns and intermediate steps, and written descriptions explaining how to create each design	1)Lacks interactive practice 2)No feedback or guidance 3) Navigation could be clearer
