

Homework 9: Iterating on Low-Fidelity Prototypes:

Sofia Hirao - Basics of piping

What was at least one positive piece of feedback from your TA.

- She liked the interactive drag and drop feature that I have for the quiz and the feedback.

What is at least one negative piece of feedback from your TA.

- Make the instructions clearer right now it is just text on one side then pictures on the other integrate them together and for every visual step have written instructions that go along with it and don't cram everything on one slide use more slides.

Jolie Abadir - Squat Assessment

What was at least one positive piece of feedback from your TA.

- She liked the scope and overall format of the prototype and thought the topic was well suited for a 10 minute lesson.

What is at least one negative piece of feedback from your TA.

- Could use more interactive visual components like overlays and annotations to help the user understand what they are looking at rather than relying on text-based explanation.

Sam - Skincare basics

What was at least one positive piece of feedback from your TA.

-They liked the topic and the way the quiz was structured and also how i used real-life product examples to showcase the information

What is at least one negative piece of feedback from your TA.

-The pictures are too small and too much text

- I think I need to iterate my prototype more

Which two prototypes will you continue to iterate on for this week?

- 1) Sofia's Basics of piping
 - a) We will focus on iterating on the clarity and flow of instructions, integrating visual and textual steps together, and breaking down complex steps into separate slides so users can follow along more easily.
- 2) Jolie's Squat Assessment
 - a) We will focus on adding more interactive visual components like arrow overlays to help users identify compensation patterns and making the teaching content

more visually guided so the user can follow along without needing text-heavy explanation.
