Notes from Care Team

Telephone Encounter

Devon Stevens, PA at 11/14/25 1334

Mount Sinai West/Morningside ED Follow up Program:

Emergency Department Call Back Provider Telephone Encounter Note

(please note: I did not personally see or evaluate this patient, am on team returning calls regarding late arriving and abnormal ED lab results)

Abnormal result: +strep**Initial treatment:** keflex (given PCN allergy)**Recommendation/Intervention:** Spoke with patient and informed him of +strep result. Informed him keflex was sent over to his pharmacy and to take as prescribed. Also recommended PCP f/u. He is amenable with this plan and will pick up the abx**Call attempt:** 3/3 Success**MyChart Message Sent:** Not needed, successful call**Telegram/Letter:** No**DOH report necessary:** No**Group A Strep PCR**

Date/Time	Value	Ref Range	Status
11/10/2025 12:26 AM	Detected (A)	Not Detected	Final

Comment:

The Strep A PCR test is highly sensitive and specific for detection of Streptococcus pyogenes/Group A Strep in throat/pharyngeal swabs from patients with suspected Streptococcal pharyngitis.

Reflex throat culture is not required routinely for specimens resulted as NOT DETECTED. The Strep A PCR test does not detect other viral or bacterial causes of pharyngitis, and throat culture may be required if symptoms persist.
