

UIDWeb_Sammy Graphic Design Slides

Screens, hierarchy, palette, typography, and weekly contribution

Most Important Screens

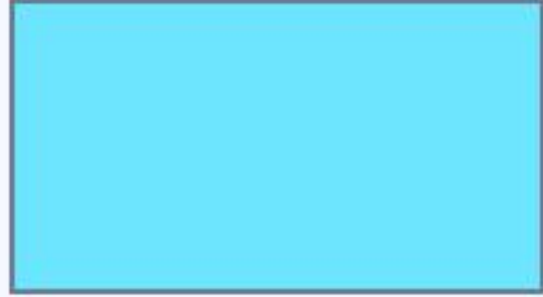

Color Palette and Usage

Base (#1A3765)

Headers, top bars, strong layout anchors

Accent (#6EE5FF)

Buttons, progress, call-to-action emphasis

Dark Grey (#1F2534)

Primary text on light backgrounds

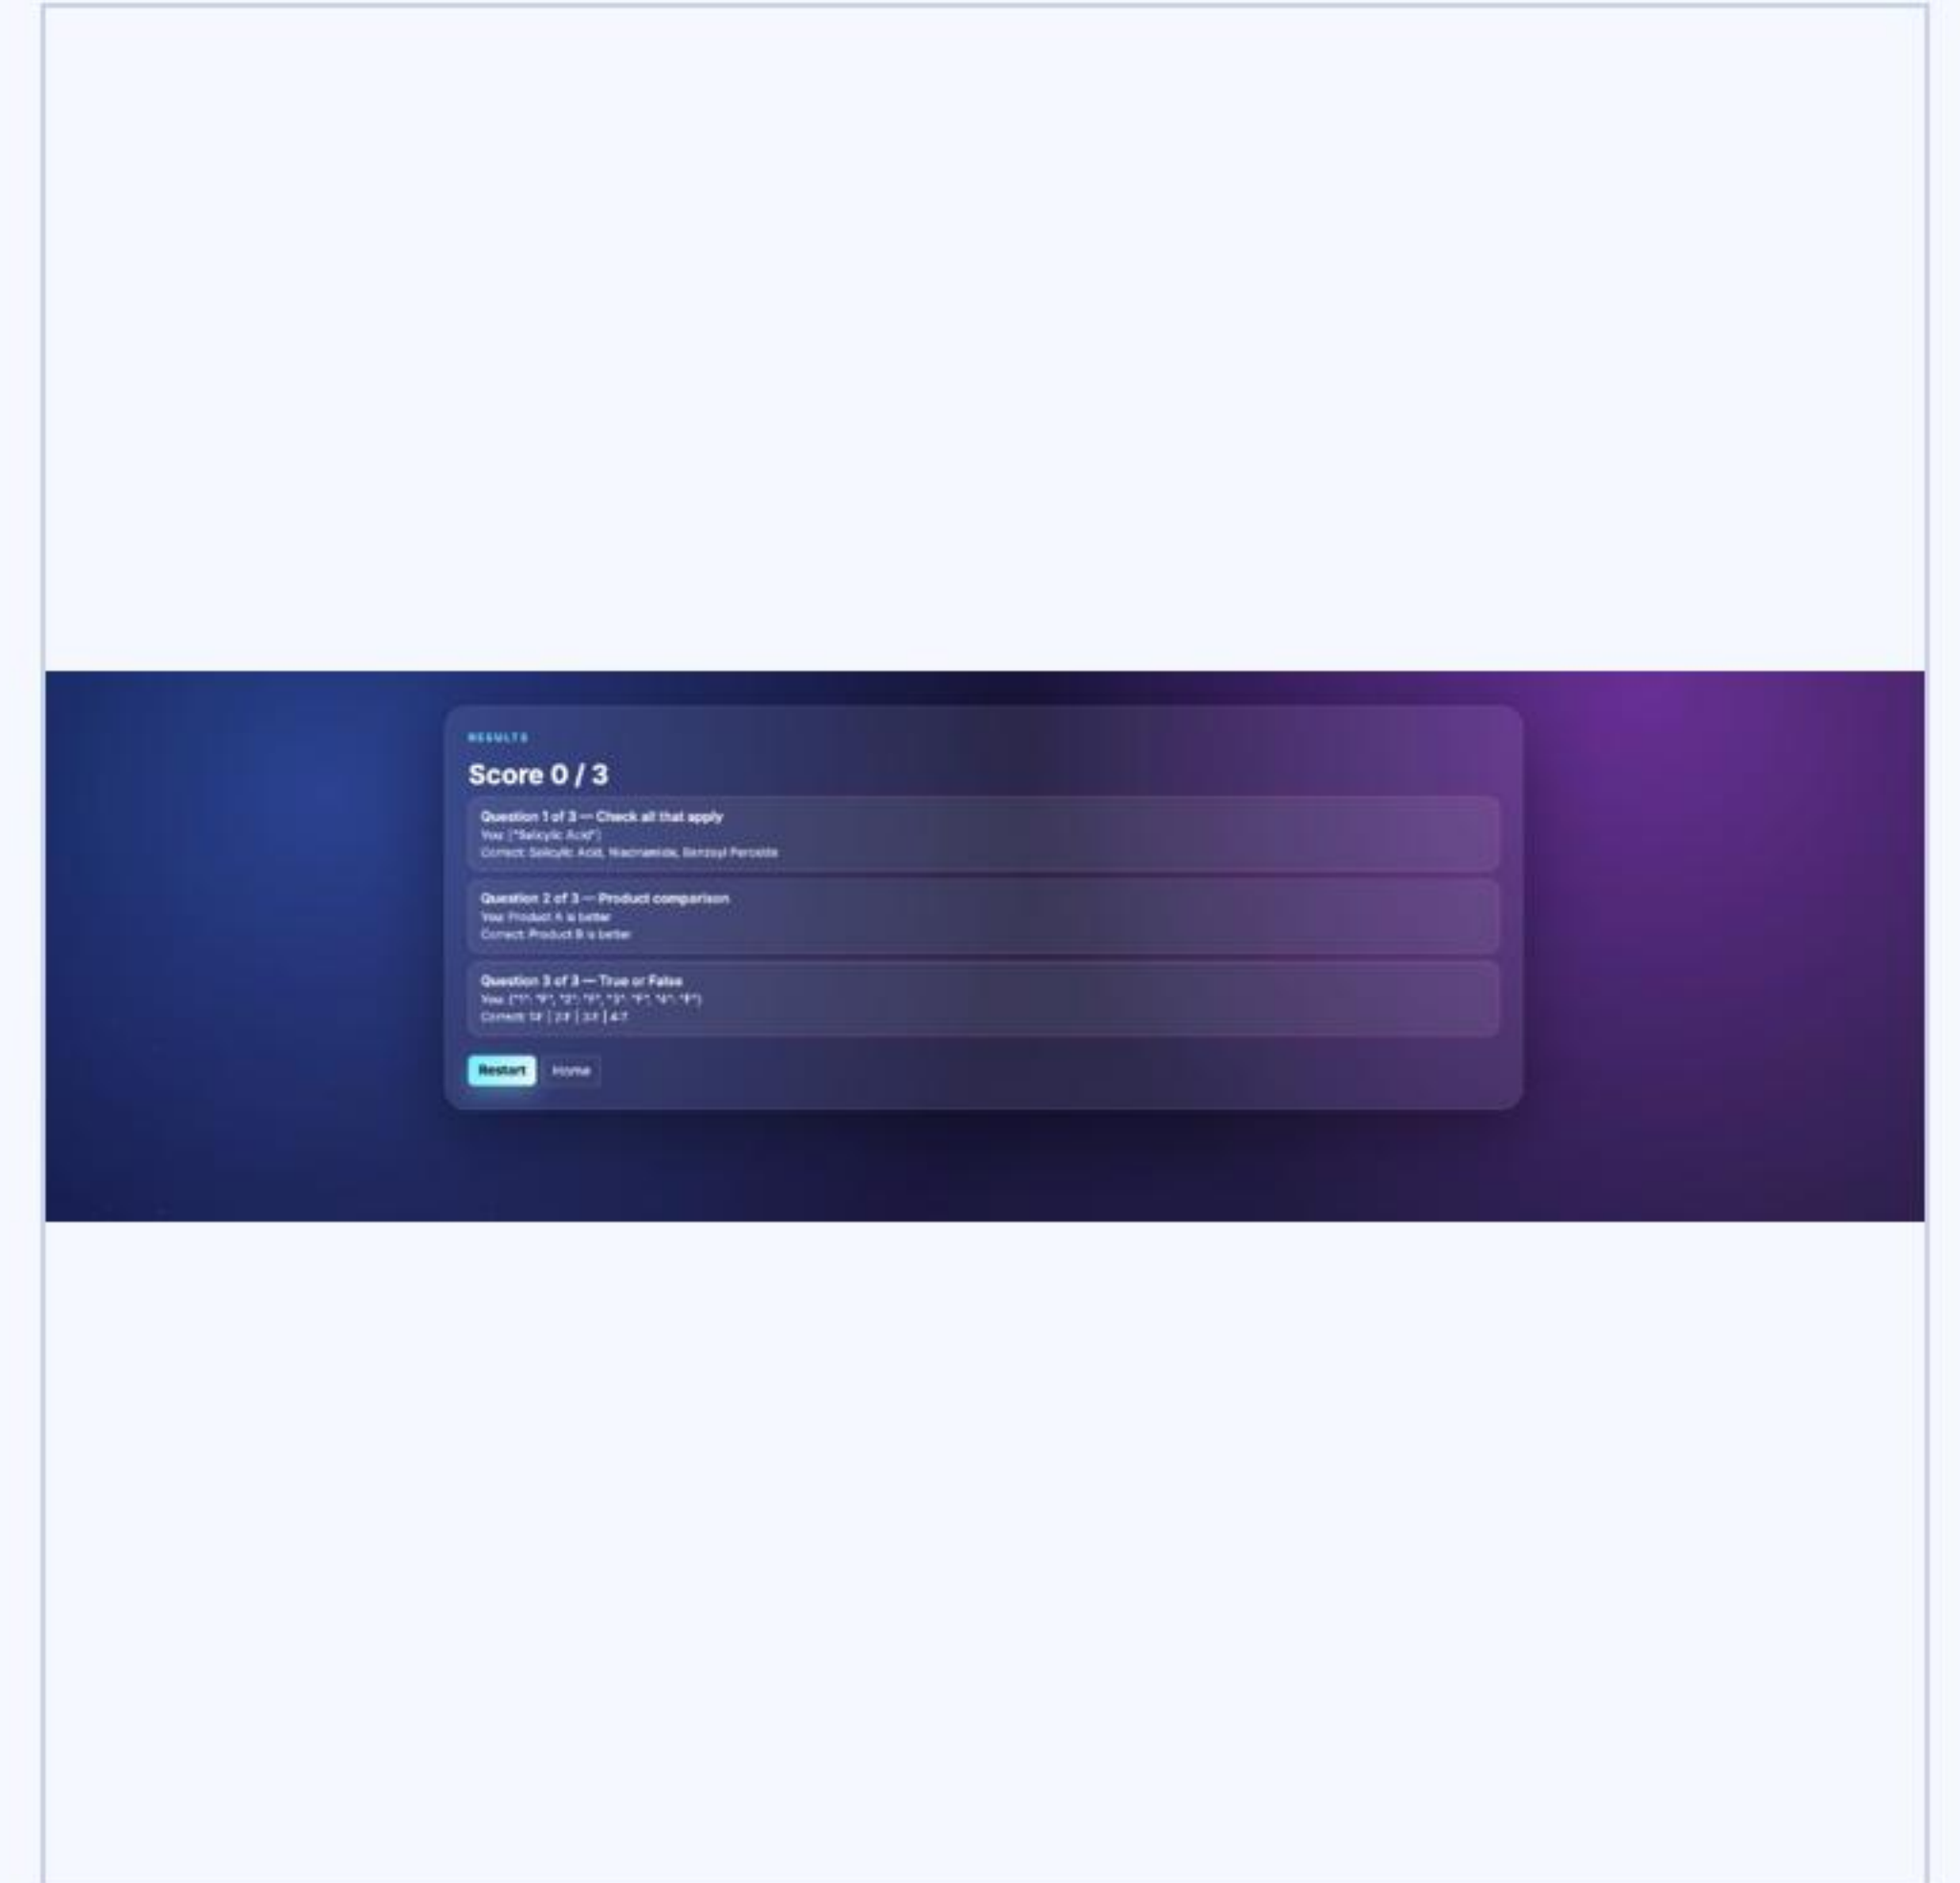

Light Grey (#F0F5FF)

Card backgrounds and subtle contrast zones

White (#FFFFFF)

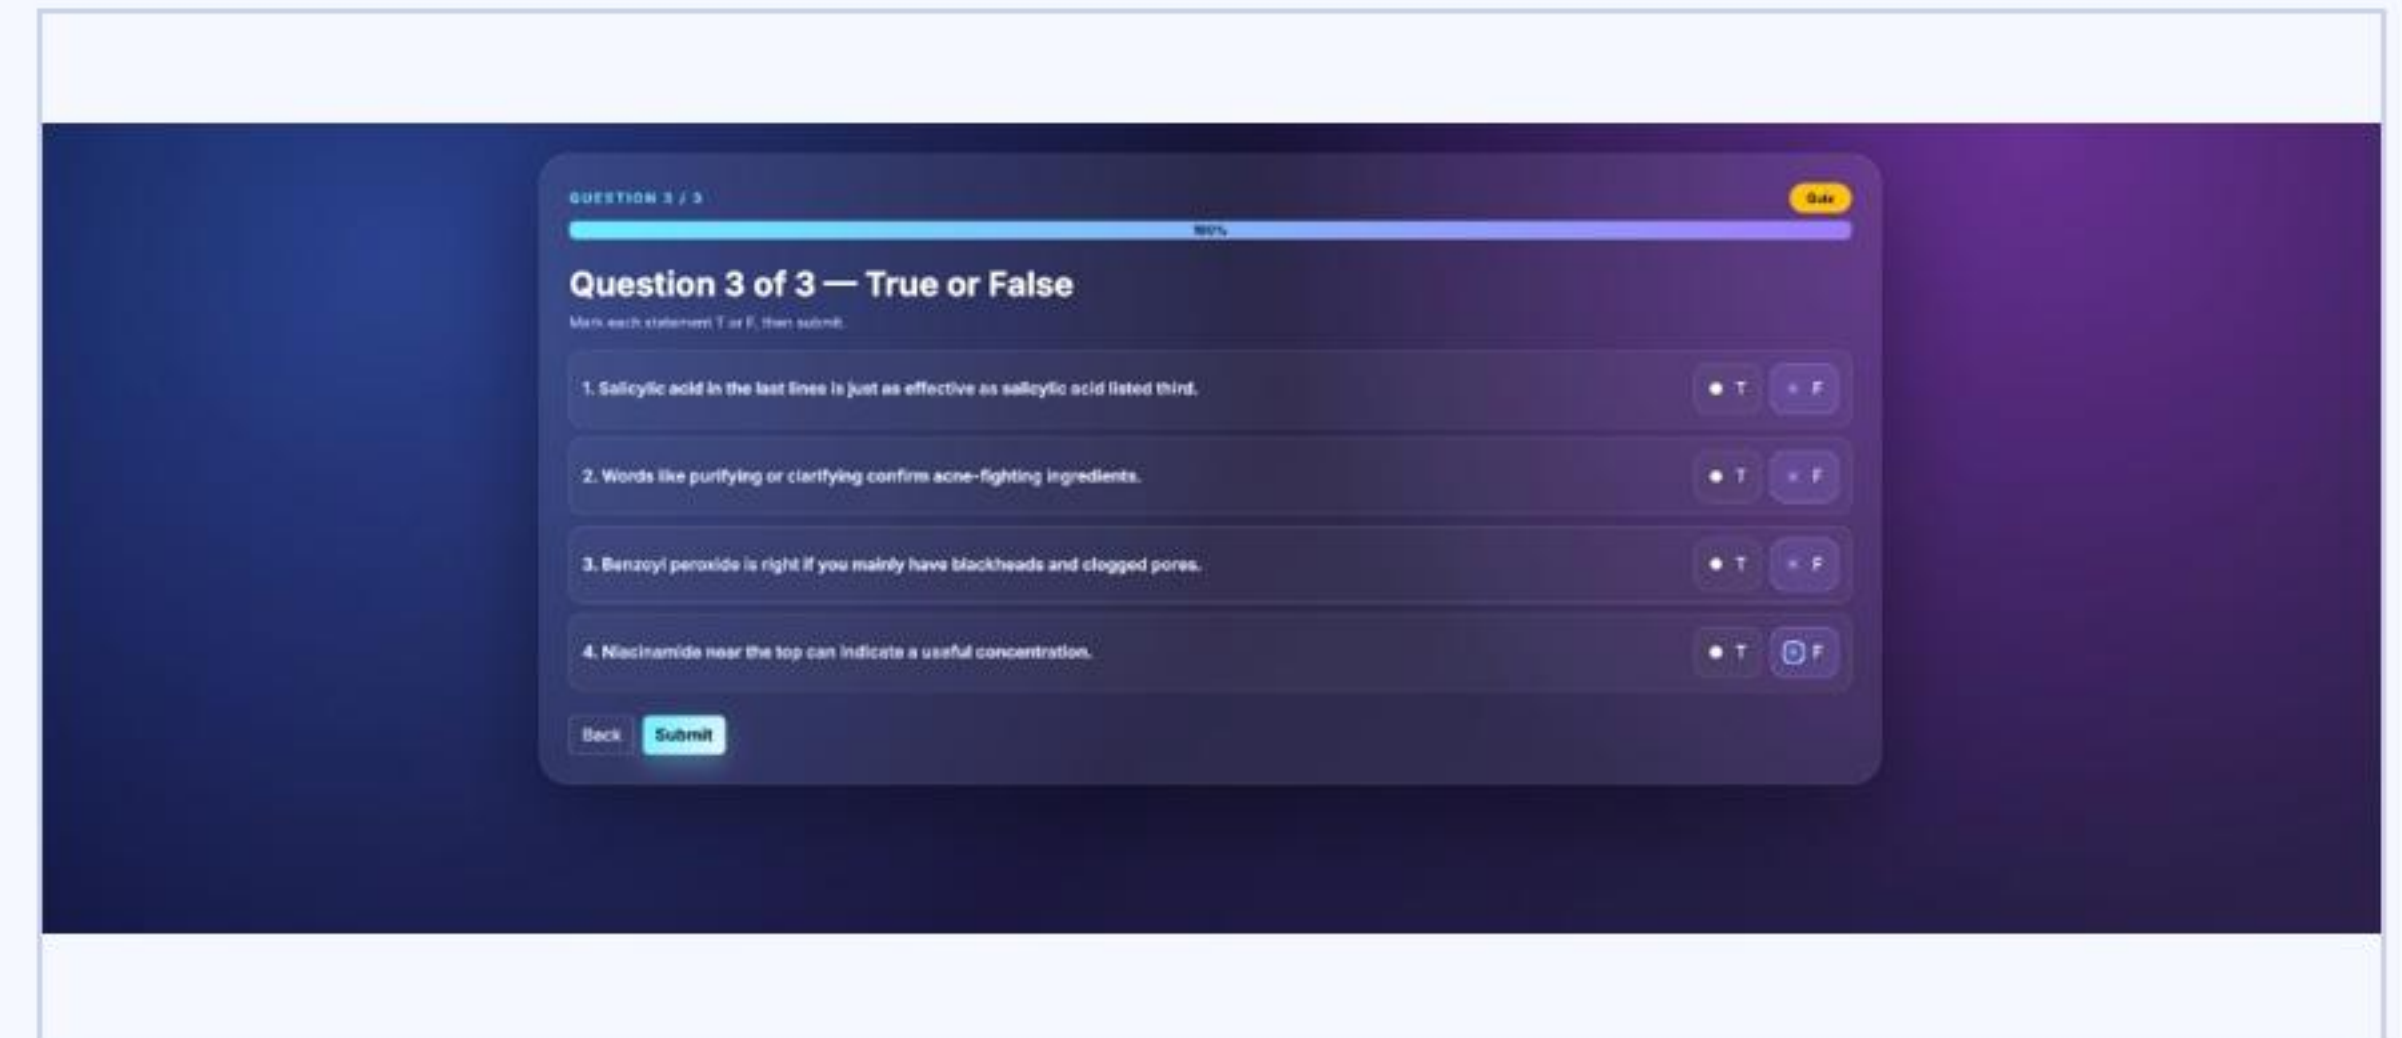

Body text on dark sections and whitespace

Visual Hierarchy and Conceptual Groups

Hierarchy Principles Used

1. Headline > prompt > options > actions ordering
2. Progress bar and badge maintain task orientation
3. Grouped cards for comparisons and feedback states
4. Consistent spacing and rounded cards for scanability
5. Contrast-driven CTA buttons for primary actions

Typography System and Font Rationale

Font Usage Across Screens

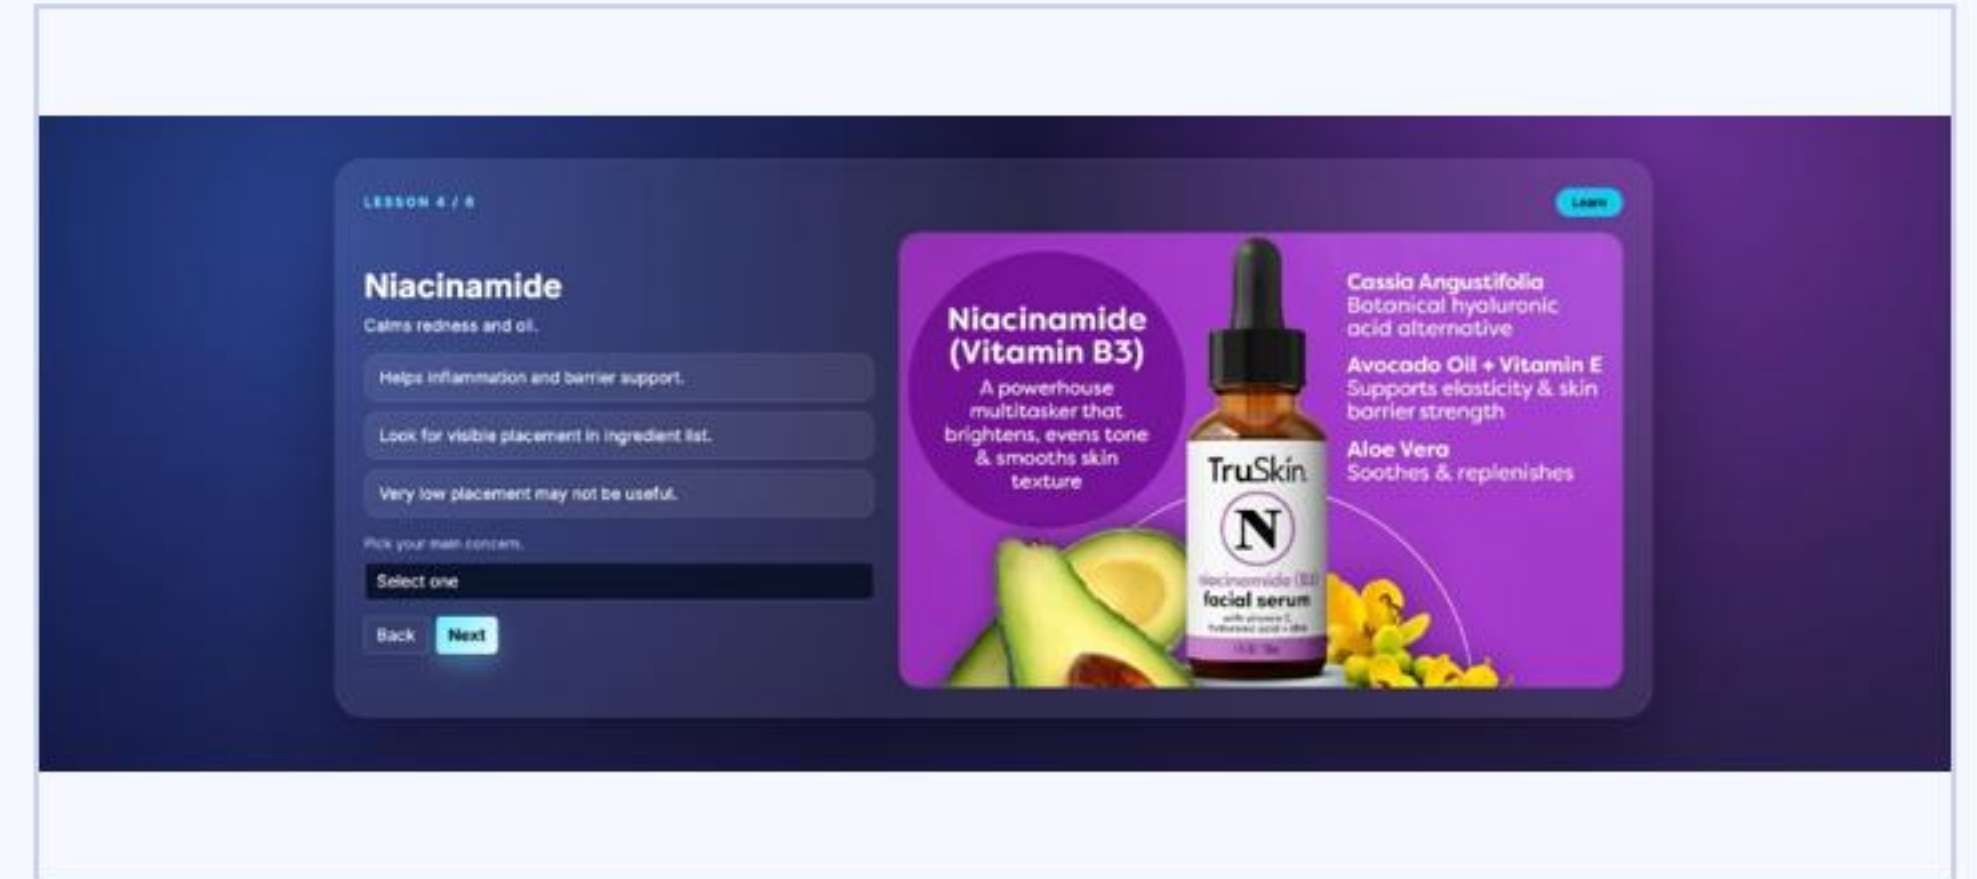

Primary font: Inter

H1/H2 headings: 44-56px bold (hero + lesson/quiz titles)

Body copy: 24-30px regular (instructions, descriptions)

Micro labels: 18-22px medium (kicker tags, helper text)

Buttons: 24-28px bold for CTA clarity

Written Answer: Font Choice and Pairing

I picked Inter because it is clean, modern, and highly readable on both desktop and mobile.

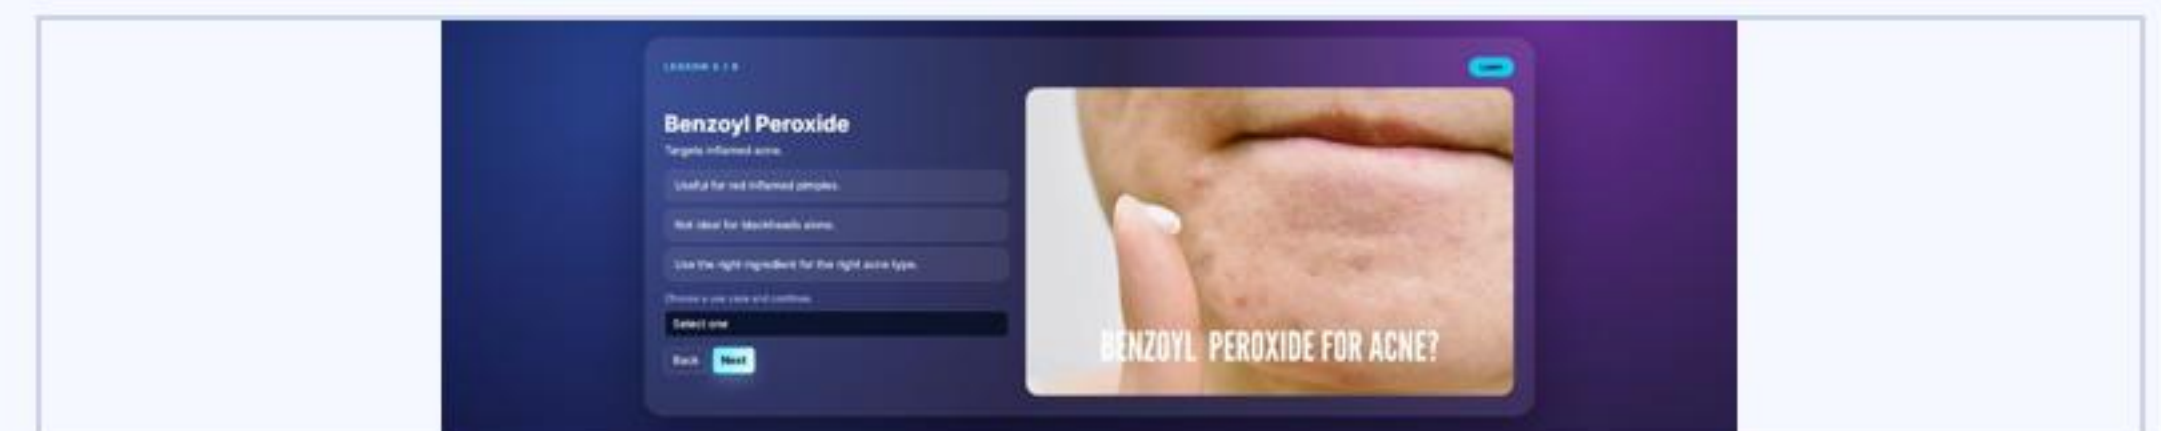

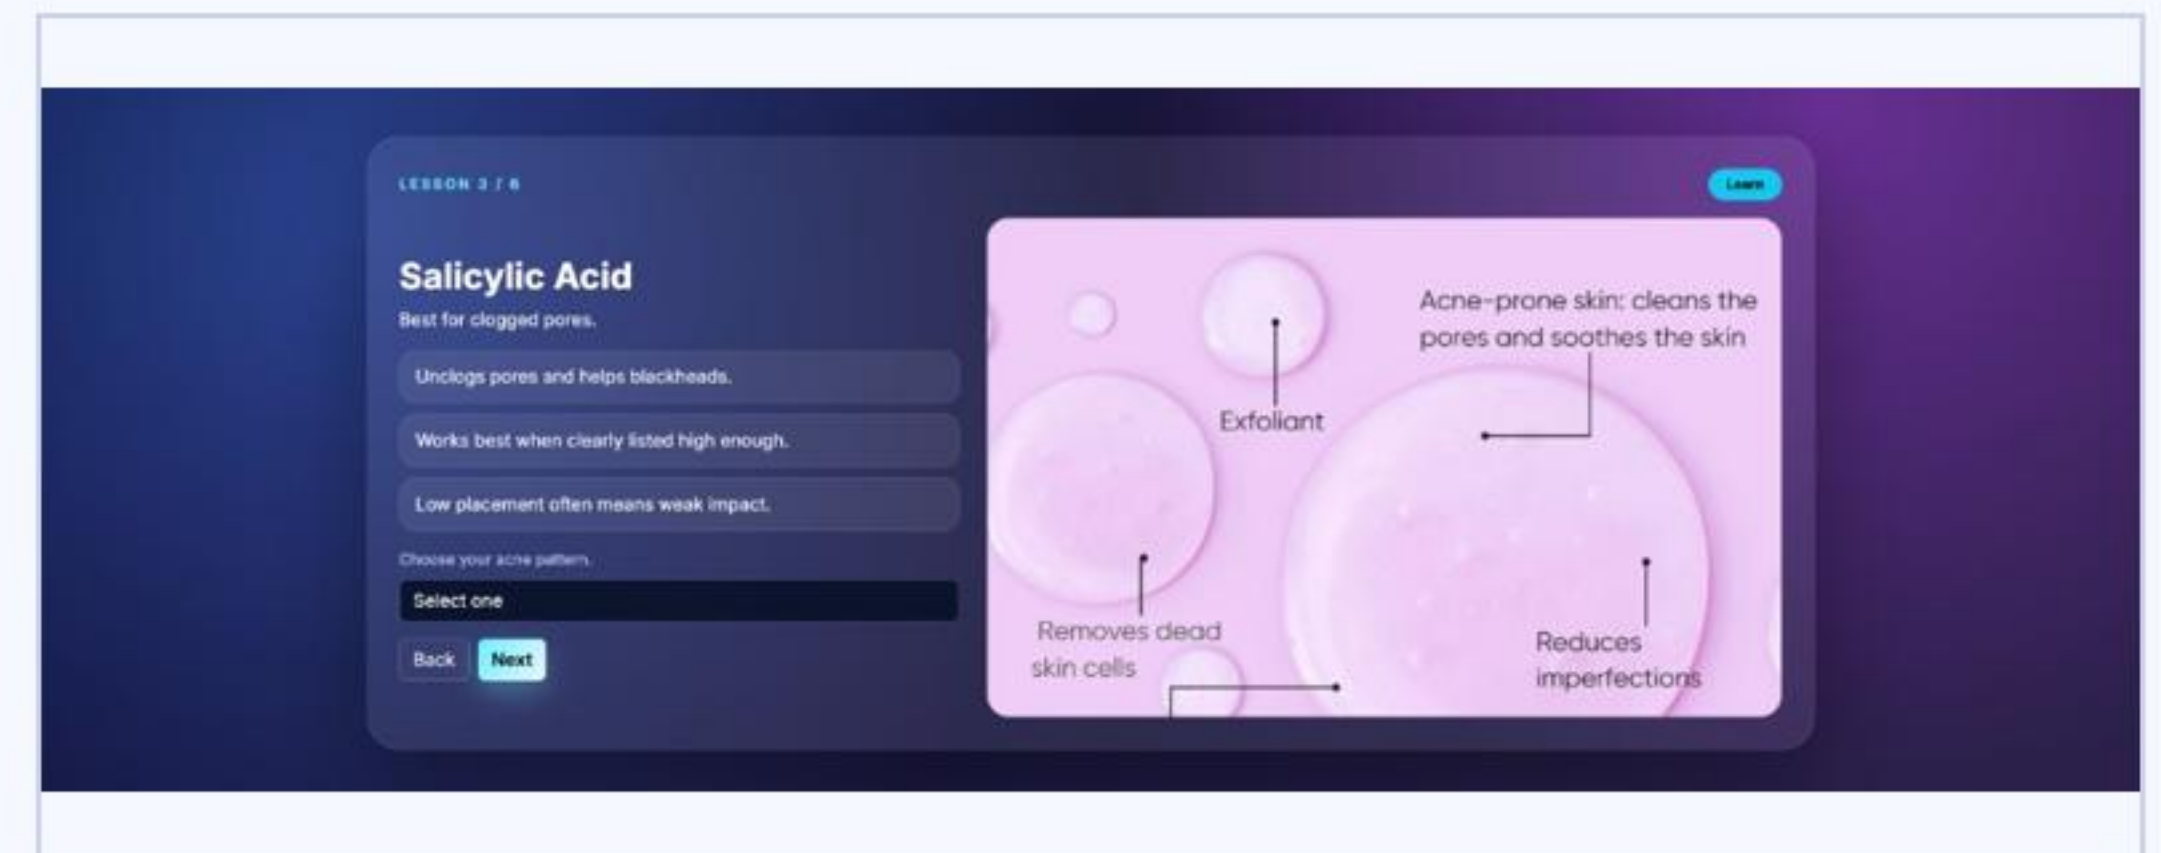

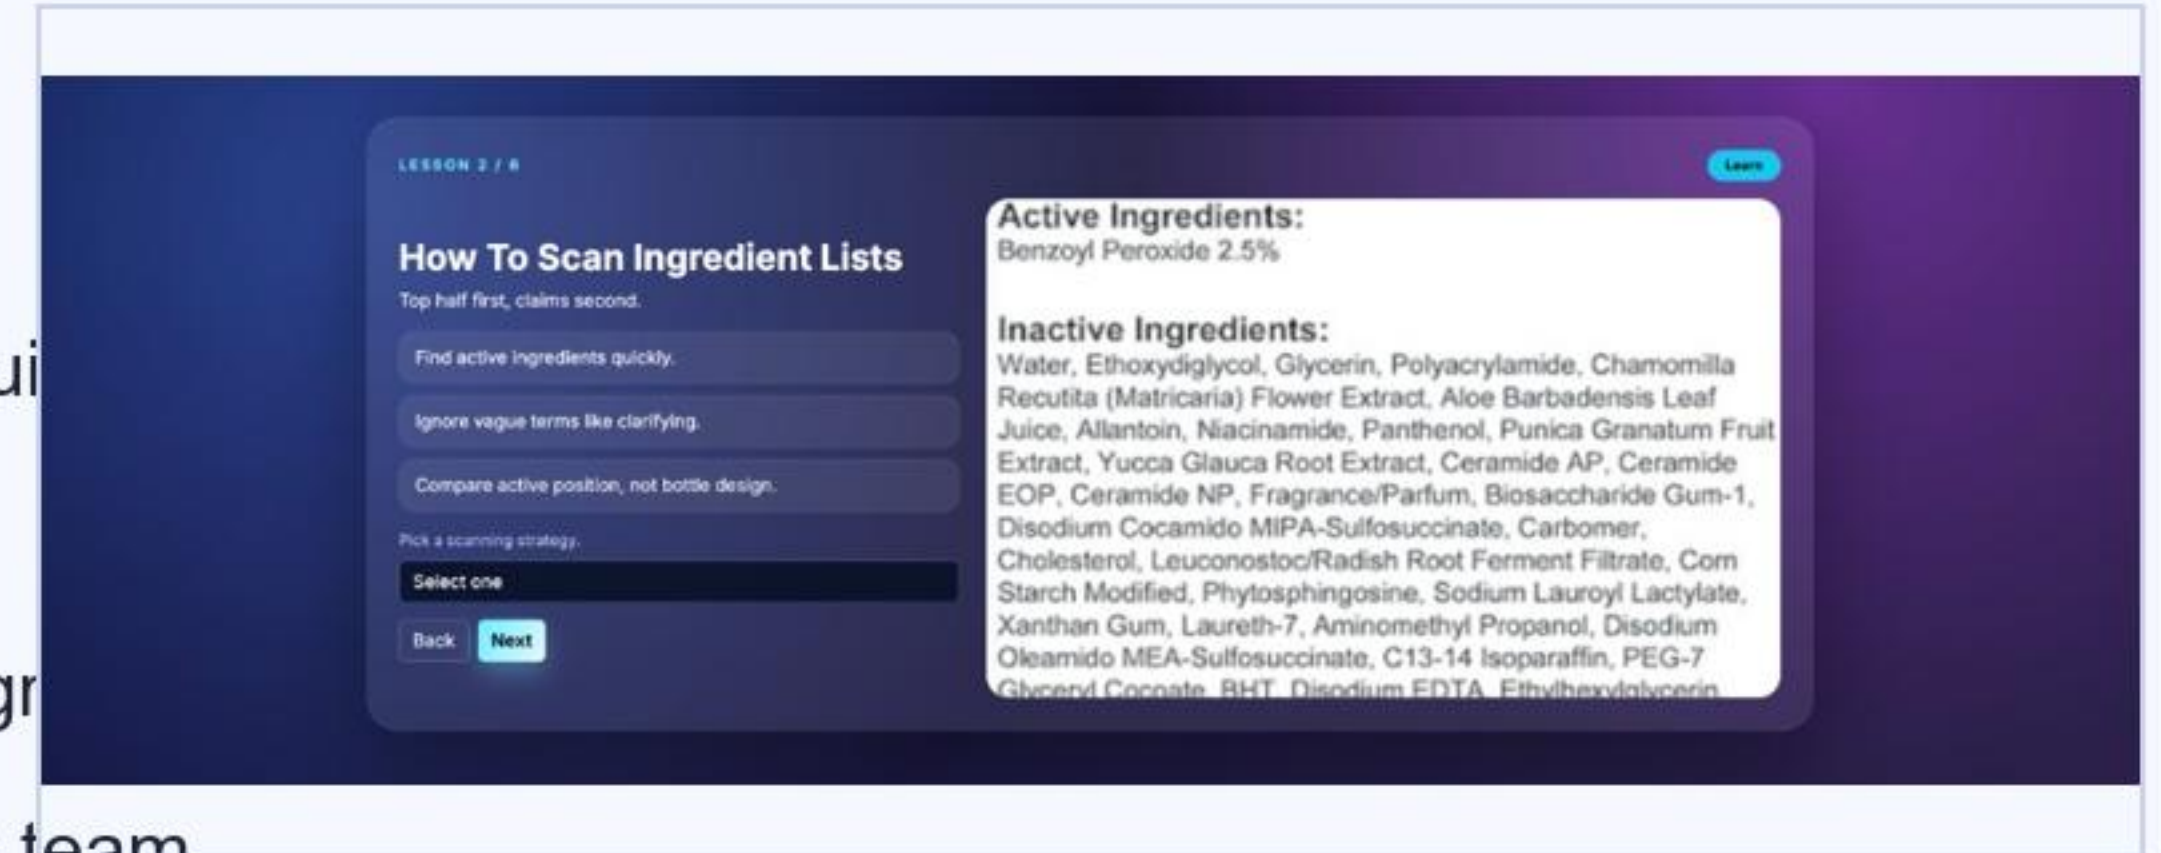

It supports strong visual hierarchy with clear weight differences for headings, labels, and body text.

The current setup is a concordant pairing, because one font family is used with consistent weight/size contrast instead of mixing unrelated typefaces.

Individual Work This Week

What I personally worked on:

- Built and refined Flask routes for home, learn, quiz, and results flow.
- Implemented user event tracking for start clicks, lesson selections, and quiz
- Redesigned UI with modern cards, progress, and interaction states.
- Converted quiz to interactive types (multi-select, single-select, true/false gr
- Integrated custom lesson images and comparison assets provided by the team.
- Added completion fireworks and polished final-page experience.

Commit Evidence and Submission Proof

Recent commit in repo

Commit hash: 7659ef9

Message: Initial functional Flask prototype for LabelCheck

How to capture your commit screenshot:

- 1) Open terminal in UIDWeb_Sammy
- 2) Run: `git log --oneline -n 1`
- 3) Take a screenshot showing commit hash + message
- 4) Include that screenshot in your individual submission

Screenshot Area Placeholder

After you run `git log`, take the screenshot and attach it in CourseWorks.
