

AI workspace for immigration operations

Investor deck

THE PROBLEM

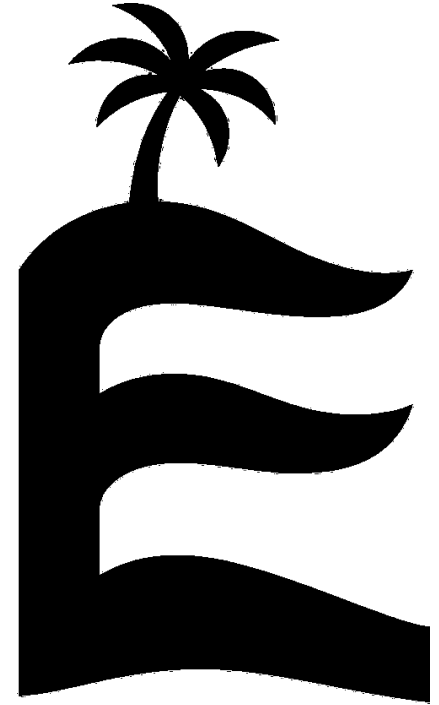

Immigration work is scattered across tools that were never built to run it.

PDFs / email / Slack / spreadsheets / portals / notices

Employers lose visibility across cases, renewals, travel, and compliance.

Employees wait for answers while critical documents live in inboxes.

Lawyers spend too much time on operational work that software can do.

**Every delay creates cost, risk,
and anxiety.**

CORE INSIGHT

Immigration is not one filing. It is a recurring operating system.

COMPLIANCE

RENEWALS

TRAVEL

RFEs

EVIDENCE

HANDOFFS

The company needs a shared source of truth. The immigrant needs instant, case-specific guidance. Counsel needs clean, attorney-ready work product.

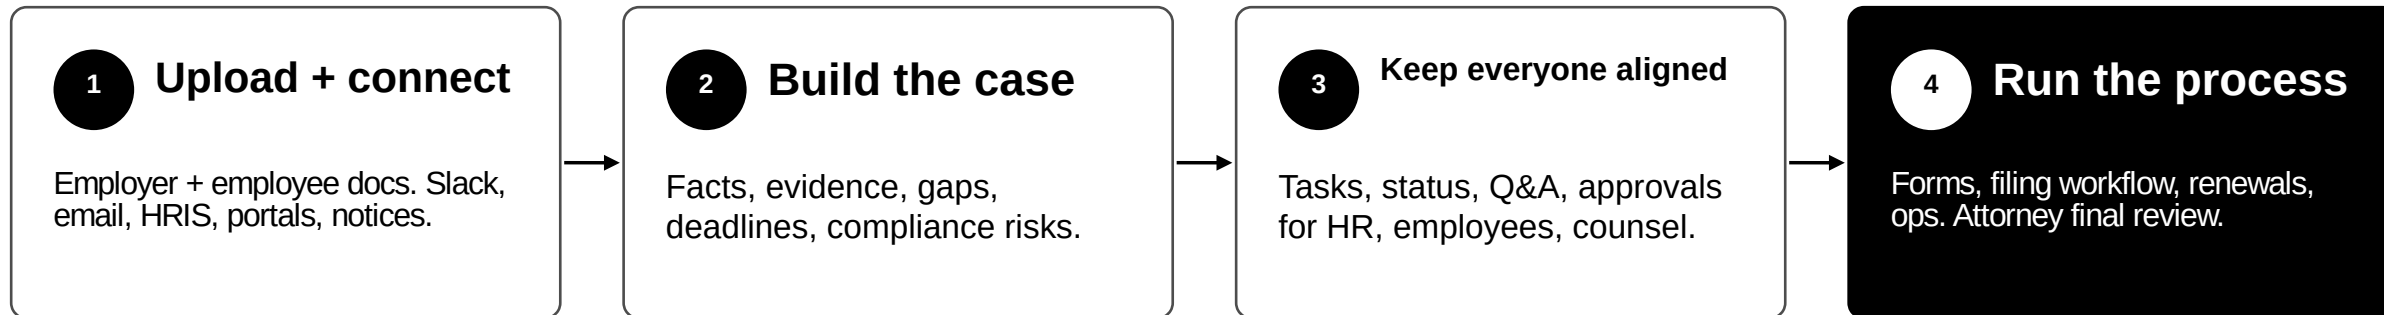

**Ellis becomes the
workspace, system of
record, and action layer.**

PRODUCT

Ellis turns scattered inputs into a managed immigration case.

Employers, employees, and counsel work from the same case truth - instead of chasing documents and status pings.

Result: fewer missing documents, fewer back-and-forth emails, and attorney-ready cases moving continuously.

AUTOMATION LAYER

Ellis does the work around the legal decision.

Lawyers still approve filings. Ellis automates the operational layer around them.

doc review

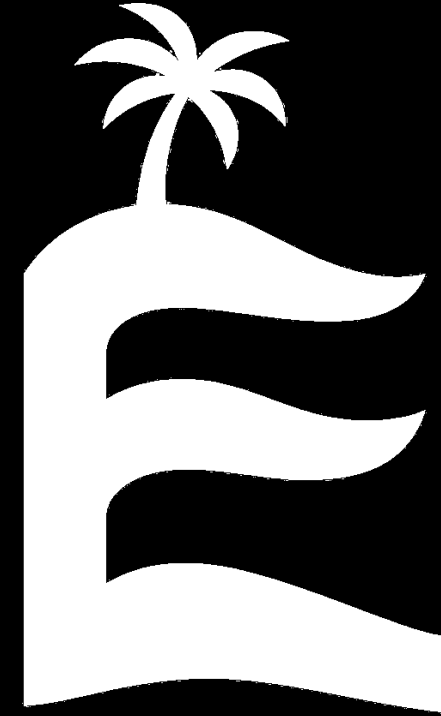

case Q&A

risk flags

notice summaries

form prep

evidence packets

**Less inbox work.
More legal leverage.**

WHO BENEFITS

One workflow. Three economic winners.

Ellis removes the operational work that makes immigration slow, expensive, and confusing.

Employees

Get case-specific answers, know what to upload, and avoid paying a lawyer for basic questions.

Employers

Automate onboarding, hiring, compliance, renewals, and immigration tasks across the workforce.

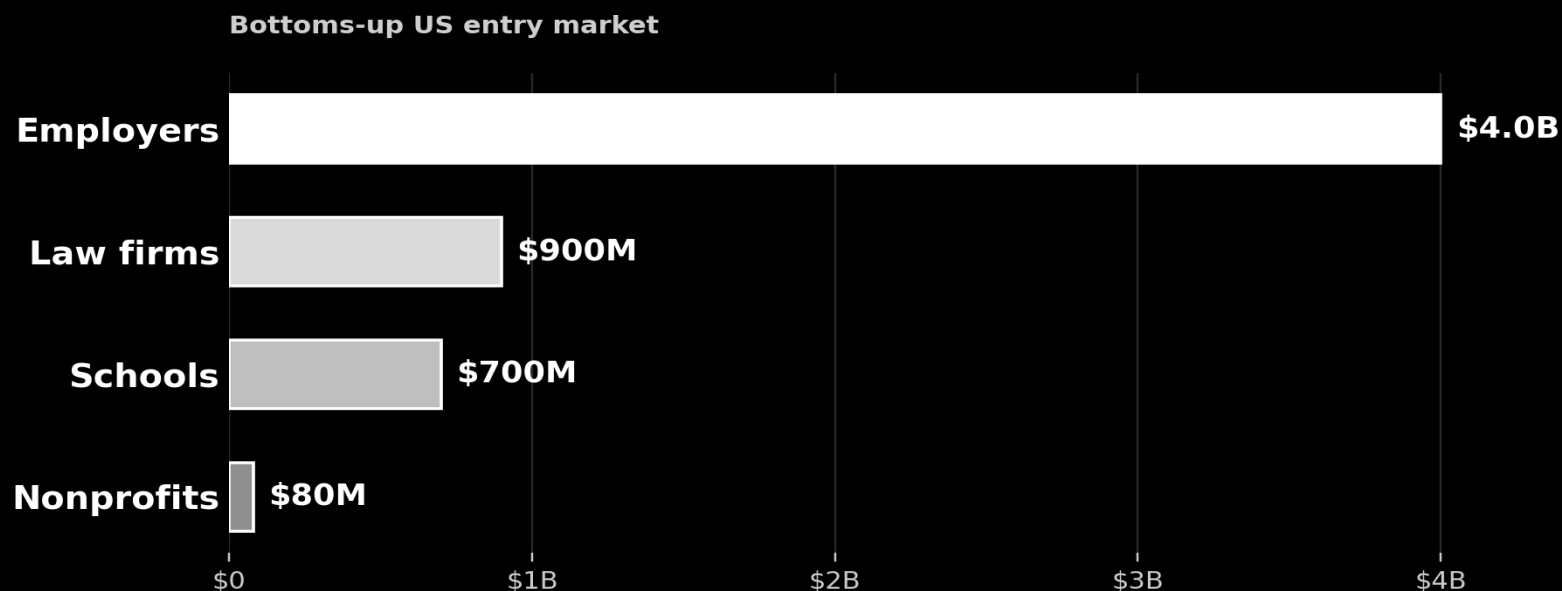

Lawyers

Receive complete, structured, attorney-ready work product and spend time on review, not inbox ops.

Lower counsel fees, faster cycles, and fewer missed obligations - without removing attorney oversight.

\$5.7B US entry market

Bottoms-up TAM across the organizations already paying to manage immigration operations.

**Subscription by
active managed
cases.**

Pricing scales with case volume across employers, law firms, schools, and nonprofits.

Expansion path: start with case operations, then become the system of record for the immigration lifecycle.

The winner is the system of record, not the fastest form generator.

Traditional firms	Fragomen, BAL	Attorney-led services: high cost, slow operating cadence
Immigration legaltech	Mayflower, LegalOS	Optimizes petitions, not the full recurring workflow
HR platforms	Deel, Rippling	Immigration is a side feature inside payroll/HR
Ellis	Shared workspace + AI action layer	Runs case ops end-to-end while counsel keeps final review

WHY NOW

AI agents can finally coordinate long-running regulated workflows.

- 01 **Messy input is now machine-readable** forms, passports, notices, evidence, emails, and messages

- 02 **Regulated workflows need persistent context** cases span months, stakeholders, deadlines, and rule changes

- 03 **Cost pressure is rising** operational legal spend can be compressed without removing attorney review

Immigration is the right wedge: high stakes, high repetition, and high coordination cost.

Built by a technical founder who has lived the stakes.

Sammy Abdella, CEO

01	Personal urgency	navigated immigration under real constraints.
02	Technical depth	Columbia CS, AI Lab research, AI safety publication.
03	Production experience	shipped backend systems at Meta and Amazon.
04	Founder-led execution	built the product code and committed full-time.

Ellis starts as case operations and compounds into the immigration system of record.

The wedge is operational. The prize is the action layer that coordinates every immigration stakeholder.
