

From *\$1K* to *\$20–50K MRR*
in six months.

Ellis's first wedge is the **H-1B visa**. The US government publishes every visa sponsor. DOL LCA disclosure files list every H-1B employer, role, wage, and law firm — refreshed quarterly. Ellis's ideal customers are literally a downloadable list.

What this means for Ellis: 30,000+ identifiable companies managing ~730,000 active cases — at \$1K per sponsored employee per month, the H-1B wedge alone is an **\$8B+/year** market, and every buyer in it is named in a public file.

Outbound process:

EXAMPLE OF AN AI-GENERATED OUTBOUND EMAIL I'D SEND TO COMPANIES TO SUGGEST ELLIS TO THEM

"Hi Sarah — **deep24** certified **2 H-1B LCAs** in Q2 (software engineers, SF) — that's roughly **\$20K+ in counsel fees** plus renewals, amendments, and compliance you now own. Ellis runs that entire lifecycle with AI and your counsel only signs off. 15 minutes this week? I'll run one of your actual visa scenarios live."

The math of automation: 300 emails/day ≈ 6,000/month → at a 4% reply rate and 30% demo conversion, that is ~70 qualified demos a month — 10× the pipeline this plan needs.

6,000 emails a month becomes *\$49K–\$121K MRR* in six months.

300 emails/day, automated	6,000 / mo
4% reply — personalized with their own filings	240 replies / mo
30% of replies book a demo	72 demos / mo
Founder capacity — 2 demos per workday	40 run / mo
Close rate — conservative 10% → funnel 25%	4–10 customers / mo

Average customer = 2 sponsored employees × \$1K **+\$8K–\$20K MRR / mo**

Even the **conservative case closes just 1 in 10 demos** and still lands at **\$49K MRR by month 6**.
