

From *\$1K* to *\$20–50K MRR*
in six months.

A precise, founder-executable growth plan — built on demand
that already exists.

Sammy Abdella · Founder & CEO New York sn3136@columbia.edu

The product is built and sold. The constraint is *distribution*.

Ellis reached revenue in its first three weeks with zero sales infrastructure.

Nothing below requires new product — only a repeatable motion to sell what is already working.

\$1K

MRR — first paying customer, live today

2 LOIs

Signed intent: VPEA and qq.com (Tencent)

12

Live AI capabilities across 3 role workspaces

\$10K+

What employers pay counsel per sponsored employee

~0

Marginal cost per case — AI runs locally

Every dollar of the plan comes from **three engines**: converting signed LOIs, precision outbound to employers who provably sponsor visas, and a counsel channel that resells Ellis into its own caseload.

Priced against a \$10K counsel invoice — closing is arithmetic.

Ellis charges per sponsored employee under management. The buyer compares it to legally mandated counsel fees, not to software budgets.

TIER	WHO IT'S FOR	CASES	PRICE / MONTH
Starter Founder-led startups, first sponsorship	1–5 employees	up to 5	\$500
Growth Scaling teams with recurring sponsorship	5–25 employees	up to 25	\$1,500
Enterprise High-volume sponsors, agencies, universities	25+ employees	unlimited	\$4,000+

The comparison every buyer makes

One year of Ellis Growth (\$18K) ≈ counsel fees for two employees — for the whole workforce

\$20K is 15 customers. It does not require a miracle.

The MRR bridge, segment by segment. Base case assumes conservative close rates; stretch assumes the two signed LOIs convert at enterprise scale.

SEGMENT	COUNT	AVG / MONTH	MRR
Existing customer Expands from Starter to Growth as headcount grows	1	\$1,500	\$1,500
LOI conversions — VPEA + qq.com Enterprise pilots converting to annual contracts	2	\$4,000	\$8,000
Outbound closes — Growth tier Employers sourced from public sponsorship data	6	\$1,500	\$9,000
Outbound closes — Starter tier First-time sponsors, land-and-expand entry point	6	\$500	\$3,000
Base case — month 6	15		\$21,500

Stretch to **\$50K**: qq.com alone sponsors at a scale where a workforce-wide deployment is a \$15–25K/mo contract; add 2 counsel-channel firms (~\$3K each) and 8 more outbound closes.

Convert the demand that is already signed.

VPEA and qq.com signed LOIs before Ellis had a sales motion. The fastest path to \$10K MRR is turning signed intent into paid deployments — with a pilot structure designed to convert.

WEEK 1-2

Paid pilot, not free trial

4-week paid pilot (\$2K) on 5 live cases each. Paying pilots pre-qualify the buyer and convert at 3-4× the rate of free ones.

WEEK 3-6

Success criteria agreed upfront

Written targets: hours of counsel time saved per case, days faster to filing, zero missed deadlines. Ellis reports against them weekly, automatically.

WEEK 6-8

Convert on the renewal cliff

Pilot ends with a case-file review meeting: here is what Ellis did, signed off by your own counsel. Convert to annual enterprise contract at \$4K+/mo.

Why this works: VPEA is an education & migration agency — every client it serves is an Ellis case. qq.com sponsors at enterprise scale. Both already said yes in writing; the pilot just prices it.

Outbound with an unfair advantage: *the target list is public.*

The US government publishes every visa sponsor. DOL LCA disclosure files list every H-1B employer, role, wage, and law firm — refreshed quarterly. Ellis's ideal customers are literally a downloadable list.

Counsel doesn't compete with Ellis. Counsel *resells* it.

Solo attorneys and boutiques drown in the operational work Ellis automates. Give them margin on it, and every firm becomes a distribution channel carrying dozens of cases.

THE OFFER

Partner program

Firms run their caseload through Ellis at a wholesale rate and keep 20% margin on every client workspace — or pass savings through and win on price.

THE HOOK

Counsel handoff is already built

Ellis assembles attorney-ready evidence packets today. For a boutique, that converts document-chasing hours into billable review — immediate, measurable leverage.

THE TARGET

10 firms, 2 convert

Recruit from firms named in the same public LCA filings — they are already attached to Ellis's target employers. Two active firms ≈ \$3K MRR each by month 6.

Compounding effect: each firm brings a caseload, each caseload exposes employers to Ellis, and each employer is an upsell to a direct Growth-tier account. The channel feeds engine 2.

Month by month: every dollar has an owner and a source.

MONTH	FOCUS	EXIT MRR
M1	Launch both LOI pilots (paid) · build 2,000-sponsor list · start outbound — 25 contacts/day	\$2.5K
M2	Convert pilot #1 to enterprise · first 3 outbound closes — case-teardown demo motion locked	\$6K
M3	Convert pilot #2 · launch counsel partner program — recruit 10 firms	\$10K
M4	Outbound at full cadence · first counsel firm live — referral loop from early customers	\$14K
M5	Land-and-expand: upgrade Starter accounts · second firm live	\$17.5K
M6	Enterprise expansion inside qq.com / VPEA — workforce-wide deployment	\$21.5K

Immigration is recurring. So is the revenue.

A visa case runs for years — renewals, compliance, travel, RFEs. Customers don't churn out of the thing keeping their workforce legal, and every new hire expands the account.

>100% NRR

Accounts expand with every sponsored hire — Starter → Growth → Enterprise is the default path.

~1 month

CAC payback — founder-led sales, near-zero marginal cost, list acquisition is free public data.

Weekly ops review

Contacts → demos → pilots → closes tracked weekly; any stage under target gets fixed that week.

\$0 new burn

Plan is executable by the founder alone through \$20K; first hire (part-time SDR) only after M4 revenue.

The discipline: no new product surface until \$20K MRR. Everything sold in this plan already exists, works, and has been paid for once.

Six months. Three engines.

\$21.5K base — \$50K if enterprise lands.

M2

First LOI converted to a paid enterprise contract; outbound motion producing weekly closes.

M4

\$14K MRR; counsel channel live; referral loop running from the first ten customers.

M6

\$21.5K MRR base case — with a clear, signed path to \$50K through workforce-wide enterprise deployment.
