

HW11 Graphic Design Feedback and Work Plan

Name: Sammy Abdella

Group: Solo group - Sammy Abdella

1. Group: TA Feedback on Graphic Design

What feedback did you get from your TA on your graphic design?

The main TA feedback was that the design should be more visual and less text-heavy. The website should rely more on images, product visuals, icons, and clear visual sections instead of large blocks of writing. The design also needs to continue becoming more polished and user-friendly so the skincare learning experience feels easier to navigate and more engaging.

What is something good about your graphic design from HW11?

A strong part of the HW11 graphic design is that the project has a clear direction: a skincare website that helps users learn through a structured visual experience. The basic website layout and purpose are understandable, and the topic naturally works well with visual design because skincare can be explained through images, product cards, icons, and step-by-step visual sections.

What are the things your TA said you still need to work on?

- Reduce the amount of text and avoid large written sections on the website.
- Add more images, skincare visuals, product cards, icons, or other visual elements.
- Make the layout cleaner, more polished, and easier to scan.
- Improve the user flow so it is clearer what the user should do next.
- Continue technical implementation so the site feels functional and interactive, not only like a static layout.
- Keep testing the design and fixing confusing parts of the experience.

2. Group: Job Assignments / Technical Implementation Plan

Since this is a solo group, Sammy Abdella will handle all roles this week.

Planned roles:

- **Graphic design / UI:** Sammy Abdella - improve the visual layout, reduce text, add images, and make the interface cleaner.
- **Technical implementation:** Sammy Abdella - continue building the website and make the main interactions work.
- **Content and media:** Sammy Abdella - choose skincare images, icons, and product/content visuals that support the lesson.
- **Testing and revision:** Sammy Abdella - test the site flow, identify confusing parts, and revise the design based on feedback.

- **Final integration and submission:** Sammy Abdella - combine the design and technical changes into the final prototype.

Technical implementation plan for this week:

- Replace long text sections with short explanations and stronger visual examples.
- Add skincare-related images, product cards, and visual sections to make the site more engaging.
- Improve navigation so users can move through the lesson without confusion.
- Implement the main interactive parts of the website, especially browsing, recommendation, quiz, or feedback features.
- Polish spacing, alignment, typography, and visual hierarchy so the design looks more complete.
- Run through the prototype as a user, fix bugs, and revise any unclear screens before submission.
