Question 1

$$a^2 + b^2 = c^2$$

question 2

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Question 3

$$1 + 2 + 3 + 4 + \cdots + 98 + 99 + 100 = \sum_{x=1}^{100} x$$

$$x_1 + x_2 + x_3 + \cdots + x_n = \sum_{i=1}^n x_i$$

$$x_1 \times x_2 \times x_3 \times \cdots \times x_n = \prod_{i=1}^n x_i$$

$$f(x) = \int_a^b x^2 dx$$

Question 4

$$f: \mathbb{Z} \rightarrow \mathbb{N}$$
$$f(x) = \begin{cases} 2x & \text{if } x \geq 0 \\ -2x - 1 & \text{if } x < 0 \end{cases}$$

Question 5

$$V = \{x \in \mathbb{Z} \mid x < 100\} \cap \{x \in \mathbb{Z} \mid x \text{ is prime}\}$$
$$V \subset W$$

Question 6

$$((\alpha \rightarrow \beta) \wedge (\beta \rightarrow \gamma)) \rightarrow (\alpha \rightarrow \gamma)$$

Question 7

1. $\forall x \exists y \ x + y = 0$
2. $\exists y \forall x \ x + y = 0$

Question 8

Proposition: If x is even, then x^2 is even.

Proof. x is an even number.

$\exists a \in \mathbb{Z}$ such that $x = 2a$

$$x^2 = (2a)^2 = 4a^2 = 2(2a^2)$$

Let $c = 2a^2$, $c \in \mathbb{Z}$

$$x^2 = 2c$$

Therefore, x^2 is even. □

Question 9

x	y	$x \vee y$
TRUE	TRUE	TRUE
TRUE	FALSE	TRUE
FALSE	TRUE	TRUE
FALSE	FALSE	FALSE
