

The AI agent that automates the *entirety* of
immigration.

Sammy Abdella · Founder & CEO New York sn3136@columbia.edu

Built by someone the system was built to keep out.

Sammy Abdella

Founder & CEO — Columbia University, B.S. Computer Science

At 18, Sammy fled Tunisia — where being gay is criminalized — escaping a pending death penalty. He taught himself English on public-library computers, earned admission to Columbia, and lived the immigration system as a lifeline. He is building Ellis on his own O-1 petition today.

An AI researcher and engineer, he turned down an offer at Google to build Ellis — named after the island that once welcomed America's immigrants.

Three weeks old — already in revenue and enterprise demand.

Ellis started just three weeks ago. The product is already built, sold, and in conversations with enterprises.

\$1K

MRR — first paying customer, live today

2 LOIs

Signed intent: VPEA and qq.com (Tencent)

3 weeks

From zero to product, revenue, and demos

US + CA

Work, study & travel — any country of origin

A full product — three role-based workspaces and 12 live AI capabilities — built end-to-end by a solo founder, already in market.

Immigration is expensive because the work is manual and scattered.

PDFs / email / Slack / spreadsheets / portals / notices

Employers pay too much to sponsor immigrants because the process is lengthy and full of tasks AI can automate faster and cheaper.

Immigrants waste time on filings that can be automated and money on routine questions AI can answer instantly.

Lawyers lose too many hours to automatable tasks and scattered inbox workflows.

Immigration is not one filing. It is a recurring operating system.

THE IMMIGRATION LIFECYCLE

One shared workspace

AI action layer that keeps the entire case moving.

Employer

Employee

Counsel

Ellis automates the work;
counsel steps in for final review.

PRODUCT

Ellis turns scattered inputs into a managed immigration case.

Employees, employers, and counsel share one AI-assisted workspace for a faster, cheaper process.

AUTOMATION LAYER

Ellis does the work around the legal decision.

Lawyers still approve filings. Ellis automates the operational layer around them.

Document review

AI question help

Risk flags

Notice summaries

Form preparation

Evidence packets

Less inbox work.
More legal leverage.

WHO BENEFITS

One workflow. Three economic winners.

Ellis removes the operational work that makes immigration slow, expensive, and confusing.

Employees

Use AI question assistance, know what to upload, and avoid lawyer fees for routine help.

Employers

Automate onboarding, hiring, compliance, renewals, and immigration tasks across the workforce.

Lawyers

Receive complete, structured case files and spend less time on document review, evidence chasing, and prep.

Lower counsel fees, faster cycles, and fewer missed obligations.

MARKET

\$4T+ global TAM

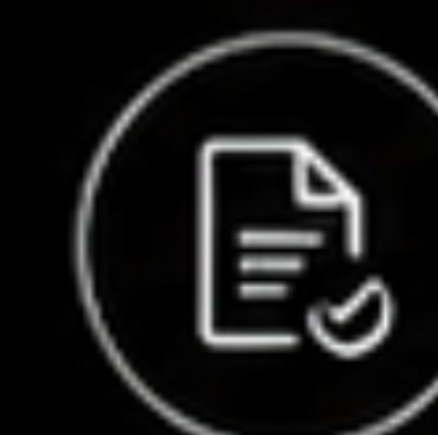

Bottoms-up global TAM across the workflow layers Ellis can ultimately power.

Start with the core wedge.

Immigration workflows

Document authenticity
+ translation

Mobility, compliance,
and employer ops

Ellis expands from immigration operations into the broader global mobility workflow stack.

**\$300B+
core wedge**

Immigration + visa services +
document authenticity + translation +
workflow + compliance.

COMPETITIVE LANDSCAPE

Not just filing forms. Ellis runs the whole immigration workflow.

WHY NOW

Immigration ops is ready to move from inboxes to agents.

- | | | |
|----|---|--|
| 01 | AI can manage the full case file | passports, forms, notices, evidence, Slack, email, and PDFs |
| 02 | Companies need to cut legal ops cost | keep counsel for final review; automate coordination, prep, and follow-through |
| 03 | Employees expect instant support | immigration should feel managed, not trapped in a ticket queue |

Who Ellis is for — and why it wins.

US employers are legally on the hook for counsel fees of **\$10K+ per sponsored employee**. Ellis delivers the same outcome for a fraction — and does what no chatbot can.

Ideal customer profile

- Tech-forward employers sponsoring foreign talent — startups to mid-market (H-1B, O-1, L-1, PERM, Canadian work permits).
- Immigration boutiques and solo attorneys automating operational work.
- High-volume sponsors — universities, education & migration agencies (e.g., VPEA), and staffing firms.

Why not a lawyer, Claude, or ChatGPT?

- **Cheaper than counsel:** employers must pay ~\$10K+ per employee; Ellis costs a fraction.
- **Private by design:** general AI may store and train on uploaded data — unsafe for immigration files. Ellis keeps everything local.
- **Fewer tokens, right answer:** Ellis is tuned to each case, so it's far cheaper to run than raw Claude or ChatGPT.
- **It actually does the work:** a chat subscription can't file forms or work USCIS/IRCC portals. Ellis can.
