

"Hi, my name is Sammy Abdella. This is my Homework 6 Search App."

"On the home page, you can see the navbar with the site title and search bar, and there are 3 popular study spots shown."

Action: Scroll a little so all 3 are visible.

"I'll click one popular item to open its detail page."

Action: Click one item (for example Milstein Center).

"Now I'm on /view/<id>. This page shows all details for the item, including text fields, number fields, and list fields."

Action: Scroll down slowly so they can see everything.

"From this page, I'll use the navbar search to run a query that returns multiple results."

Action: Search Library and submit.

"Here are multiple search results, and the page shows the query text."

"Now I'll click the second result."

Action: Click second result in list.

"This opens another detail page with full item data."

Action: Scroll to show all fields again.

"Next, I'll do a search that returns zero results."

Action: In navbar, search zzzzzzz and submit.

"We can see the message: No results found."

"Now I'll test whitespace-only search."

Action: Click search box, type spaces only, press Enter.

"The app does not perform a search, and the focus stays in the search bar."

"Finally, I'll click the website title to go back home."

Action: Click title in navbar.

"That's the full required functionality. Thank you."
