

T-Station Visa Information Base

To: Trip.com Group, Visa & Insurance Business Unit · Attn: Hazel Huang

Contract value USD 99,600 for year one: the build on your section 2.1 lines, plus twelve months of operations priced below.

1 · ONE-TIME BUILD on your section 2.1 lines

YOUR LINE	WHAT IT DELIVERS	USD
Base setup and storage	P0 Information Quality Control Backend (25-field checklist, confidence grades, five-stage correction queue, change log, Excel export) and P1 Visa Information Query Tool (13 document types, 7 purposes, deep links). Server, database and the Docker install package.	9,000
Version rollout, base	P2 Display pages in English, Simplified and Traditional Chinese with special policy notes, P3 AI Q&A Assistant (multi-turn, bilingual, every exchange logged), operations manual, data caliber specification and acceptance documents for all five stages.	10,000
PLUS version, 18 sites at 1,700	The dataset at PLUS depth for every station: every destination, 25 fields per record, every record bound to an official page with a verbatim quote. Today 1,360 records, 99.9% complete, zero low-confidence.	30,600
Build total		49,600

The build is priced exactly on your section 2.1 estimate, USD 49,600. Operations are priced separately, because a visa database is only as good as its last check.

2 · OPERATIONS everything that recurs after go-live, USD 50,000 a year, billed quarterly

ITEM	USD / MONTH	USD / QUARTER
24/7 maintenance: a dedicated engineer on call around the clock. Rules on every dispute the re-check raises (30 in one run on 3 September), repairs blocked or moved official links (37 in the same run), keeps the 48-hour and 24-hour windows, answers Trip.com operations the same day	2,300	6,900
Model usage at peak volumes, priced with no cache discount (page 2): every record re-read 15 times a month, 25,000 new route decisions and 15,000 composed answers	1,000	3,000
Verification and acceptance reporting: monthly full review of all 1,360 records, quarterly two-way sampling, written evidence per the Acceptance and Delivery Standard	450	1,350
Hosting, security and backups: dedicated server at 99.99% monthly availability, TLS, daily full backups kept 30 days with a 1-hour recovery objective, external uptime monitoring, security patches and dependency updates	250	750
Official-source coverage: routes your stations ask for that are not yet in the base are researched and released with government sources within 48 hours, and new regional or transit policies become notes	167	500
Operations total	4,167	12,500

Year one: build plus 12 months of operations

USD 99,600

Build USD 49,600 once, operations USD 50,000 a year. After year one it is operations only, **USD 50,000**, and the system is yours.

3 • PAYMENT

30%	of the build at Stage 2, functional acceptance (USD 14,880)
30%	of the build at Stage 3, grey release (USD 14,880)
40%	of the build at Stage 4, full acceptance, all 18 sites on the PLUS version (USD 19,840)
Quarterly	Operations USD 12,500 per quarter from full go-live

Payment on acceptance and verification, per Ctrip standard policy. Prices exclude taxes.

4 • MODEL USAGE IN TOKENS peak volumes, largest measured sizes, no cache discount

OPERATION	MODEL	TOKENS IN / OUT	UNIT USD	PER MONTH	USD
Automatic re-check of one record against its official page, every 48 hours	Kimi K2.7	10,000 / 1,000	0.0135	14,000	189
First-time route decision, not yet cached	Kimi K2.7	4,000 / 1,200	0.0086	25,000	215
Deep research, up to twelve government pages	Kimi K2.7	40,000 / 4,000	0.0540	500	27
AI Q&A, one composed answer	Kimi K3	3,000 / 800	0.0210	15,000	315
Reading an unclear question into a route	Kimi K2.7	800 / 200	0.0016	15,000	24
Translation deltas and policy notes	Kimi K2.7				30
Peak headroom, 25%					200
Model usage per month					1,000

Rates are Moonshot's September 2026 list prices with no cache-hit discount: Kimi K2.7 at USD 0.95 per million input tokens and 4.00 per million output, Kimi K3 at 3.00 and 15.00. Sizes are the largest measured on the live system: a government page capped at 28,000 characters, the full 25-field record and the conversation. Volumes assume 500,000 queries a month across 18 sites with 95% served from cache, and every record re-read at least every 48 hours, which is 15 reads a month. These volumes are included in the fee. Usage above them is billed at the same unit costs, quarterly in arrears.

5 • WHAT THE ENGINEER'S MONTH LOOKS LIKE one re-check run, measured on 3 September 2026

Records re-read against their official pages in one 100-minute run	305
Corrected by machine, with the government quote saved	15
Disputed against a human-verified value and sent to a person to rule	30
Official pages that could not be read and need a link repaired	37
Disputes open for a person at the end of the day	85

Four such runs a day produce more rulings and link repairs than a part-time reviewer can hold inside a 48-hour window, and every ruling is an adjudication against an official source, not clerical work. That is why maintenance is priced as one dedicated engineer, on call around the clock.

6 • WHAT THE OPERATIONS FEE COVERS

- Every record re-read against its official page at least every 48 hours, corrections applied with quotes, disputes ruled by a person
- Policy changes live within 48 hours, urgent changes within 24 hours, every stage timestamped
- A dedicated engineer on call 24/7 for the site, the data and Trip.com operations, with incident response inside the 1-hour recovery objective
- Monthly full review of every record and quarterly two-way sampling, with written evidence per the Acceptance and Delivery Standard
- Hosting at 99.99% monthly availability, TLS, daily full backups kept 30 days, external monitoring, security patches and dependency updates
- New routes released with government sources within 48 hours of being asked for, and new policy notes as regional or transit rules change
- Model usage up to the peak volumes in section 4, and every improvement to the four modules during the term

7 • SOURCES

1. Trip.com Group cost breakdown, section 2.1, by email: base setup USD 9,000, rollout base USD 10,000, PLUS version about USD 1,700 per site across about 18 sites.
2. Moonshot AI published API rates for Kimi K2.7 and Kimi K3, September 2026.
3. T-Site Visa Information Base Acceptance and Delivery Standard, sections 4.3, 5.3 and 6.1.
4. Live environment: every figure in section 5 is readable in the console's Freshness tab and change log. ellis-visa.com · ellis-visa.com/#ops

Section 2.2 of the same email, US appointment scheduling and form filling, is outside this quotation and can be quoted separately.
